# New scheme being introduced to boost electronics manufacturing

The Ministry of Electronics and Information Technology is planning to bring in a reworked flagship incentive scheme for electronics manufacturing, with an aim to boost local production. The revised policy is aimed to accelerate investments in the country and simplify the disbursement process for the companies setting up units under the scheme.

Modified Special Incentive Package Scheme (M-SIPS) was launched in July 2012 for a three-year period and was revised to include white goods manufacturers and extended till 2020.

According to Aruna Sundarajan, IT Secretary with the ministry, ease of doing business and stable fiscal regime which Goods & Services Tax (GST) would bring, would make India an overall attractive place for manufacturing.

# Consumer electronics to grow at a CAGR of 9.5 per cent

The Indian consumer electronics industry is expected to grow at a CAGR of 9.5 per cent, from 2015 till 2021, as per a report by industry body Consumer Electronics and Appliances Manufacturers Association (CEAMA) and Frost and Sullivan.

The report states that, while the industry currently employs 152,000 people, there is still a wide gap between required and available workforce, which might threaten the pace of growth. It also mentioned that industry growth shall necessitate investment in the workforce employed in installation, service and repair.

According to Manish Sharma, president of CEAMA and CEO of Panasonic India, due to the gap in demand and supply of engineers, technical incompetency of fresher engineers, lack of soft skills, high attrition rate and rise of new technologies, the industry will witness an avoidable opportunity loss.

# India's IoT market to grow at 28.2 per cent

India's Internet of Things (IoT) market is expected to grow exponentially over the next six years. Major drivers of this market in India are initiatives taken by the government, growing acceptance of smart applications and increasing Internet penetration across the country. The government of India has launched various projects such as 100 Smart Cities project and organisations for the adoption and implementation of the IoT.

According to 6Wresearch, India's IoT market is projected to grow at a CAGR of 28.2 per cent from 2016 to 2022. For the growth of the overall market, the smart cities project is expected to play a vital role. World Bank and Asian Development Bank are anticipated to provide loans of US$ 500 million and US$ 1 billion, respectively, to India for the development of the project. Among all applications, industrial application contributes the maximum revenue share in Indian IoT market due to its growing usage in energy management, smart building, manufacturing, conserving energy and environment.

# On The Move

### Pulkit Trivedi joins Facebook India
