Cyient announces establishment of semiconductor subsidiary

Cyient Ltd has announced the expansion of its semiconductor business by setting up a fully owned subsidiary that will acquire the integrated semiconductor technology business of Cyient and deliver application specific integrated circuits (ASIC) design and chips sales. The subsidiary will focus on designing and selling specialised chips using a fabless model for analogue mixed-signal chips.

BIG Tech invests ₹10 billion for new facility near Chennai

Bharat Innovative Glass Technologies Pvt Ltd (BIG), a joint venture between Optiemus Infracom and Corning International, is set to invest ₹10.03 billion to set up a new facility in Tamil Nadu's SIPCOT Pillaipakkam Industrial Park. The plant will produce front-cover glasses for electronic devices. This investment highlights Tamil Nadu's growing role in electronics manufacturing and India's shift in global supply chains.

TVS Electronics manufacturing facility launched in Karnataka

TVS Electronics Limited (TVS-E) has unveiled its new electronics manufacturing services (EMS) facility in Tumakuru, Karnataka, featuring advanced surface mount technology (SMT) for precision electronic manufacturing. This expansion enhances TVS-E's capability to offer comprehensive services from design to end-of-life support. The plant emphasises sustainability with power from a 400kV solar plant, reinforcing the company's commitment to the 'Make in India' initiative.

Hitachi Energy India secures ₹7.9 billion for Marinus Link

Hitachi Energy India recently bagged a ₹7.9 billion order from Hitachi Energy Australia to develop high-voltage direct current (HVDC) links for the Marinus Link project between Tasmania and Victoria. The four-year project involves supplying voltage source converter (VSC) HVDC technology and supporting infrastructure. This contract underscores Hitachi Energy India's role in enhancing global energy infrastructure and integrating renewable energy.

Government approves schemes to transport 9GW renewable energy

The central government approved new Inter State Transmission System (ISTS) schemes to transport 9GW of renewable energy from Rajasthan and Karnataka. Costing ₹135.95 billion, the projects aim to support India's goal of 500GW of renewable capacity by 2030. Aiming towards grid stability, the Rajasthan scheme will deliver 4.5GW to Uttar Pradesh, while Karnataka's one will provide 4.5GW by June 2027.

Union Cabinet approves ₹74.53 billion offshore wind system

The Union Cabinet has approved a ₹74.53 billion viability gap funding (VGF) scheme for offshore wind energy, with ₹68.53 billion allocated for 1GW capacity in Gujarat and Tamil Nadu. The plan includes ₹6 billion for port upgrades and aligns with India's offshore wind policy. It aims to generate 3.72 billion units of renewable electricity annually and supports future expansion to 37GW.

Brookfield aims $10B investment in Indian renewable energy sector

Brookfield Asset Management plans to invest over $10 billion in India's renewable energy sector through its second fund, BGTF II. Previously, Brookfield deployed $15 billion via BGTF I, with 10% allocated to India. The firm is exploring opportunities in electric vehicles, green hydrogen, and EV charging infrastructure, aiming for significant growth in the sector.

Tamil Nadu to enhance renewable energy and power infra

The Tamil Nadu government plans to invest ₹7 billion to enhance renewable energy and power infrastructure. This includes funding for 2000 new transformers, substations in Tiruppur and Tiruchi, and upgrades to existing transformers. The state aims to boost renewable energy capacity by 2000MW through partnerships and new policies.

Defence Ministry halts deal with Defsys

India's Defence Ministry has suspended Defsys Solutions for six months due to its role in the AgustaWestland VVIP helicopter corruption case. The company, previously blacklisted in 2022, faces this penalty after a Central Bureau of Investigation probe revealed bribery and money laundering linked to the 2010 helicopter deal.

Indian Army to go green by introducing electric buses

The Indian Army plans to replace traditional fuel-based vehicles with electric buses, which aligns with the government's zero-carbon goal for 2030. The Army is trialling 113 electric buses, including 40-seaters with a 250km range, from vendors Ashok Leyland and JBM. This shift promotes eco-friendly practices and technological advancement, boosts local industry, and offers significant long-term cost savings by reducing fossil fuel dependency.
