Why Your Cloud Provider's Business Must Be As Stable As Yours

Digital businesses cannot afford to have unauthorised data access in the cloud, nor have their cloud services provider unexpectedly shut down shop. As a corollary, end-users are advised to engage with economically-stable and well-entrenched cloud services providers

At the start of this decade, many regional IT managers expressed concern whether their organisations would ever embrace cloud as a platform or not. They mused that cloud is perhaps suitable for very specific workloads, but they would never migrate their mission-critical workloads to an external platform.

As we move into the next decade, much of the regional mindset has changed to embrace cloud as a business-enabling platform, while keeping mission-critical workloads on a private cloud or even a hybrid cloud platform.

Sheer cost and agility advantages of the public cloud platform is driving regional IT spending into this area at a double-digit growth rate. Requirements of in-country data regulations and compliance is attracting large cloud providers to invest locally. And such players are increasingly investing inside the region and in countries like the UAE and Saudi Arabia, in a relatively steady but consistent manner. According to global research and consulting firm Gartner, the number of managed cloud services providers is predicted to triple by 2020.

So, all seems to be well-established for the rapid movement forward into the
