A Device That Enables SELLING UNUSED INTERNET DATA From Your Mobile Network

**CHRISTOPHE
BUREAU**
BOARD MEMBER, DotDot

What if you could sell your remaining mobile data before the end of the month or even daily? Christophe Bureau, a Board Member of DotDot, in a conversation with EFY's Mukul Yudhveer Singh, sheds light on what the Dot device offers beyond assisting users in selling their unused internet data

What exactly does DotDot do?

At the end of the day or month, many gigabytes remain in our mobile subscriptions. DotDot allows users to trade these gigabytes completely anonymously.

How is it done?

A DotDot device, priced at approximately ₹1000 in India, is paired with a phone to create a 100-metre Wi-Fi zone. Users within this range can purchase data from the DotDot network.

Before we get into the details, what inspired the name DotDot?

My idea was to connect the dots between people by helping them share gigabytes of internet data, all while ensuring the anonymity of both the seller and the buyer.

Why would someone want to use such a device when they can use their phone as a Wi-Fi router?

DotDot, unlike a phone, does not require sharing passwords, ensuring optimal cybersecurity for users. Additionally, while a phone's Wi-Fi zone is limited to 25 metres, DotDot extends this range to 100 metres.

Can you explain the whole process from a user's and a buyer's point of view?

As a buyer, I connect to a nearby DotDot, where the app replaces the need for a password. From the seller's perspective, purchasing a 'dot' enables them to pair it with their phone, creating a Wi-Fi zone to which nearby users can connect.

Why would my mobile network allow this?

Mobile network providers often face a churn rate of 12% to 20%, indicating the percentage of custom-

ACCORDING TO COUNTERPOINT RESEARCH, INDIA CURRENTLY HAS OVER 600 MILLION SMARTPHONE USERS. AS PER NOKIA'S ANNUAL MOBILE BROADBAND INDEX (MBIT) REPORT, AVERAGE DATA CONSUMPTION PER USER IN INDIA REACHED 19.5GB PER USER A MONTH IN 2022
