

ics Manufacturing Cluster (EMC) in Hyderabad, is set to start operations by 2025, aiming to meet domestic needs and enhance the global supply chain.

CERC issues tariff regulations for renewable energy sources

The Central Electricity Regulatory Commission (CERC) has issued regulations for tariff determination from renewable energy sources, effective from April 1, 2024 to March 31, 2027, for grid-connected renewable energy projects, including wind power, small hydro, biomass, solar, and more. The regulations establish a Control Period, procedures for determining project-specific tariffs, and norms for capital costs and capacity utilisation factors. CERC will determine generic tariffs annually, promoting stability in the sector.

Samsung Semiconductor India Research launches new R&D facility in Bengaluru

Samsung Semiconductor India Research (SSIR) has inaugurated a new research and development (R&D) facility in Bengaluru to advance semiconductor research and address the company's need for advanced infrastructure. The facility, located in Bagmane Capital Tech Park, spans 14,864.48 square metres and is designed to accommodate around 1600 employees. It features a modern layout, over sixty state-of-the-art meeting rooms, a cafeteria, medical facilities, nap rooms, and recreational areas.

Union Minister Ashwini Vaishnaw commissions Applied Materials India Validation Centre at Bengaluru

Applied Materials has inaugurated the 'India Validation Centre' (IVC) at its Bengaluru facility, a significant step in supporting the semiconductor ecosystem in India. The centre, commissioned by Union Cabinet Minister Ashwini Vaishnaw, will focus on validation, process engineering, lab management, and collaboration with academia and suppliers. It has added new capabilities for semiconductor equipment design, characterisation,

and qualification, and demonstrated the processing of 300mm wafers.

India to train tribal students in semiconductor technology, boost internet connectivity in remote areas

Government, with the help of Indian Institute of Science (IISc) and the Indian Space Research Organisation (ISRO), will provide advanced training in semiconductor technology to tribal students and enhance mobile and internet connectivity in remote tribal villages. A training fab unit will be established at IISc to offer a course on semiconductor technology for 200 tribal students. There are plans to establish V-SAT stations in 80 villages across Jharkhand, Madhya Pradesh, Maharashtra, and Odisha, with plans to extend the project to other states.

C-DAC and IBM collaborate to accelerate high-performance computing

The Centre for Development of Advanced Computing (C-DAC) and IBM have signed an MoU to form a joint working group to accelerate high-performance computing (HPC) in India. It will focus on processor design, system design, firmware, and application development, along with contributions to open source initiatives. The HPC working group aims to address skilling, competency, and ecosystem building in HPC design research and provide guidance to startups, co-development support, and capacity-building workshops.

EDA tools to be equipped in over 100 colleges in India

The Indian government is providing over 100 colleges with electronic

design automation (EDA) tools from Siemens EDA, Synopsys, and Cadence at subsidised prices to prepare students for the growing chip industry. The initiative is part of the Chips to Startups (C2S) programme, which aims to train 85,000 people in VLSI and embedded system design over five years. It aims to encourage students to launch startups in the semiconductor field through collaborations with institutions like IITs and the IISCs.

AI and geospatial tech to boost MGNREGA management

The Ministry of Rural Development (MoRD) has signed an MoU with the Indian Institute of Technology Delhi (IITD) to boost the management of MGNREGA assets using geospatial and artificial intelligence technologies under the BhuPRAHARI project. Executed by IITD's HydroSense lab, the project aims to leverage ground and space-based geospatial technologies along with AI to monitor and manage MGNREGA assets, improving transparency and operational efficiency.

BIWIN and Lenovo collaborate to launch SSDs in India

BIWIN has partnered with Lenovo to launch a new line of Lenovo-branded SSDs in India, combining BIWIN's manufacturing expertise with Lenovo's global brand recognition. The lineup includes the Lenovo LN960 M.2, the Lenovo LN940 M.2, and the Lenovo LN560 6.3cm (2.5-inch) SSD. Fortune Marketing Private Limited has been appointed as the National Distributor for these products in India. The collaboration aims to meet the growing demand for advanced storage solutions in the Indian market.
