Reverse Battery Protection in Automotive

Done with Power
Schottky PPH10100-AQ

Reversing a device's power supply polarity can result in damage. Swapping the positive and negative leads can create "smoke signals" or subtle malfunctions. Although devices are designed to prevent incorrect plugging, mistakes can still occur, leading to potential issues.

The Schottky rectifier PPH10100-AQ is identified as being well suited to this type of application, meeting the challenging demands of efficient and space-saving designs. The Rectifiers combine low reverse current, and low forward voltage to enable the best efficiency at high ambient temperatures. The PPH10100-AQ is a 10A, 100V power Schottky diode with automotive qualification and up to 175 °C junction temperature. The TO-277A package is compact, small, and slim.
