GaN power amplifier for satcom

CML Micro has introduced the CMX90A705, a Ka-band gallium nitride

(GaN) power amplifier for high-volume satellite communication terminals. This

two-stage GaN linear power amplifier delivers +37.4dBm (5.5W) of saturated power. It is available via DigiKey, Mouser, and RFMW. CML Micro anticipates scaling power to 10W or 20W for future needs.

CMOS image sensor for HPD

OMNIVISION has launched the OV01D1R, an intelligent CMOS image sensor designed for human presence

detection (HPD), infrared facial authentication, and always-on (AON) functionality. This low-power sensor

operates independently from the laptop's RGB camera, ensuring continuous operation even when the RGB sensor is obstructed. It addresses the growing demand for privacy and touch-free biometric authentication in laptops.

Wide-terminal chip resistor

Stackpole introduces the RNWA, a thin-film chip resistor that combines wide terminations with exceptional precision and reliability.

The RNWA offers tolerances as low as 0.1% and a temperature coefficient of

resistance (TCR) down to 25ppm, making it ideal for demanding applications. This resistor addresses the scarcity of wide termination chip resistors suitable for high precision and reliability. It is RoHS and REACH compliant, lead-free, halogen-free, and meets AEC-Q200 qualification standards, ensuring it is suitable for automotive use.

Half-brick DC/DC converters

Traco Power introduces the TEP 150UIR and TEP 200UIR series of railway-certified DC/DC converters, engineered for high performance in

harsh environments. These compact half-brick converters support various

nominal system voltages and feature a fully encapsulated design for durability. These converters offer up to 3000V AC isolation, remote on/off and trim functions, and protections against short-circuits, overvoltage, and overtemperature. Backed by a 3-year warranty, they ensure reliability and safety for demanding applications.

Incremental encoders

CUI Devices' Motion and Control Group has introduced the AMT12 series, an addition to its AMT incremental encoder family, designed for motor

shaft sizes from 1mm to 6.35mm. The series features proprietary

capacitive ASIC technology, ensuring durability, accuracy, and resistance. Preferred by robotics engineers for its compactness and precision, the AMT12 is also valued by industrial automation professionals and OEM manufacturers for its customisable resolutions and robust specifications.

1200V SiC Schottky diodes

Vishay Intertechnology, Inc. has introduced 16 new Gen 3 1200V silicon

D²PAK 2L (TO-263AB 2L)

carbide (SiC) Schottky diodes. Featuring a merged PIN Schottky (MPS) design, these diodes offer high surge current robustness, low

forward voltage drop, low capacitance charge, and minimal reverse leakage current. They are ideal for AC/DC power factor correction (PFC), DC/DC output rectification, solar inverters, energy storage systems, and data centres.
