

## ESP32 development board for IoT

ADIY's ESP32 development board is designed for IoT applications with Wi-Fi, Bluetooth, and BLE support. It includes a 32-bit dual-core MCU known for low power consumption. The board supports AP, STA, and AP + STA wireless

modes and is available in many variants. It supports 802.11 b/g/n Wi-Fi, Bluetooth v4.2 BR/EDR, and BLE, with memory options of 4MB, 8MB, or 16MB of Flash and up to 512kB RAM.

## TEST & MEASUREMENT

### Zone triggering oscilloscopes

Rohde & Schwarz introduces the industry's first ASIC-based zone triggering in its MXO series oscilloscopes, significantly enhancing event isolation.

These oscilloscopes feature bandwidths ranging from 200MHz to 2GHz and support up to

8 channels, offering the fastest zone trigger implementation in the industry. This ASIC-based solution supports future hardware acceleration, ensuring new functionalities without significant trigger blind times. The MXO's free run mode captures events quickly, making it ideal for power integrity and EMI debugging, with real-time waveform storage matching zone criteria.

## MISCELLANEOUS

### Network on chip

Cadence Design Systems, Inc. has expanded its system IP portfolio with the Cadence Janus network-on-chip (NoC). Designed for complex SoCs and

multi-chip systems, it efficiently manages high-speed communications with minimal latency, aiding in achieving

power, performance, and area (PPA) targets. The scalable architecture allows for future reuse, with compatibility for industry-standard interfaces like AXI4 and AHB, utilising Tensilica RTL generation tools and the system performance analysis (SPA) tool for performance insights.

### eSIM for GSMA standard for IoT

STMicroelectronics has introduced the ST4SIM-300, the first embedded SIM (eSIM) compliant with the new GSMA standard for IoT, SGP.32. This stand-

ard enhances IoT device management on cellular networks, supporting 5G and LPWAN. It enables automated

remote SIM provisioning, simplified SIM profile management, and seamless network switching. The eSIMs, in various form factors including WLCSP, suit applications like smart meters, GPS trackers, and medical wearables. Built on an EAL6+ certified microcontroller, it ensures secure communication and scalable security for IoT devices.

### 4th Gen AMD EPYC servers

Netweb Technologies India Limited, an Indian OEM in computing, has launched a new range of servers featuring 4th Gen AMD EPYC processors. Available in 1U, 2U, 4U, and worksta-

tion models, these servers support dual AMD EPYC 9004 series proces-

sors with up to 256 cores and up to 6TB of memory. These servers support diverse workloads, promoting the 'Make

in India' initiative.

### I/O for PXI and LXI systems

Pickering Interfaces has launched four new industrial digital I/O families for PXI and LXI systems, enhancing their high-density digital I/O modules with

expanded voltage and current ranges

and programmable logic levels. These additions bolster Pickering's portfolio, offering the most comprehensive PXI and PXIe digital I/O modules in the industry. Ideal for automated test systems, these modules enable digital sensor signal acquisition, industrial device communication, and relay driving.

### Label with e-paper display

Ynvisible Interactive Inc., in collaboration with Swiss company Hive-Zox,

has launched ConnectedLabel, a smart label with integrated e-paper displays for moni-

toring pharmaceutical and healthcare shipments. Hive-Zox's connected monitoring as a service (cMaaS) enhances supply chain visibility with real-time, product-level tracking. These smart labels offer real-time alerts and product information, showcasing significant potential in retail, logistics, and medical industries.
