

# At-a-glance view of key industry trends that can shape the future of your business...

## Global Consumer Electronics Market to Hit \$1.18T in 2025

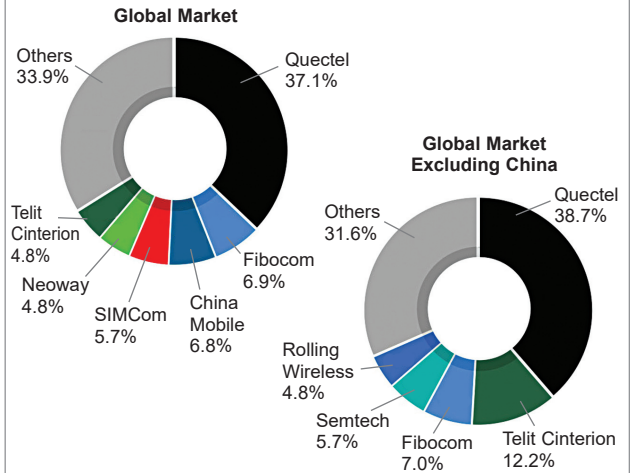

Global spending on consumer electronics is projected to reach \$1.18 trillion by 2028, with smartphones and gaming equipment leading the growth. Despite this long-term outlook, a \$5 billion decline is expected in 2024, bringing revenue to \$1.04 trillion, a 0.48% decrease YoY. The decline stems from reduced sales of smartphones and PCs. Modest recovery is expected in 2025.

## Global Cellular IoT Module Market Trends Upward

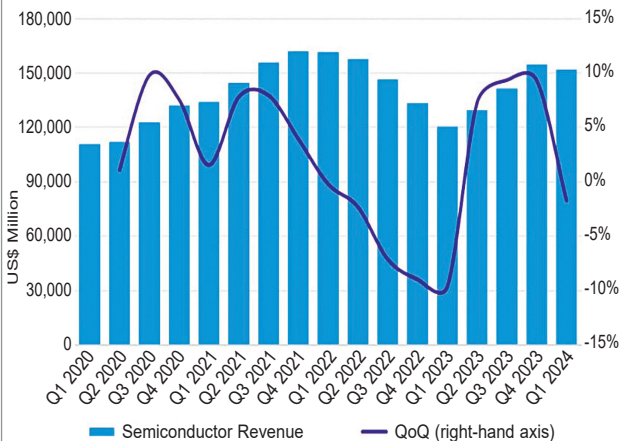

In Q1 FY24, the global cellular IoT market grew 7% YoY, led by China and India, with a 9% CAGR projected from 2023 to 2030. Excluding China, other markets saw a 2% decline due to inventory and demand issues. Recovery is expected by 2025, driven by 5G RedCap and Chinese government subsidies. Key players in the sector are Quectel, Fibocom, and China Mobile.

## AI Demand Saves Semiconductor Market in Q1 2024

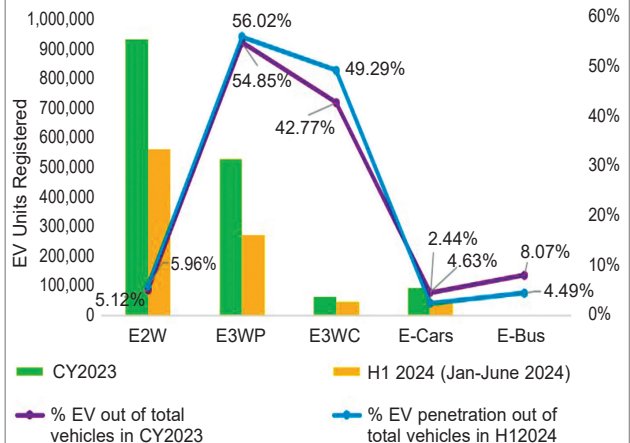

The global semiconductor market declined 2% to \$151.5 billion in Q1 2024. Only data processing grew 3.7% due to AI demand, boosting NVIDIA's market share to 14.5%, surpassing Samsung and Intel. The consumer segment fell 10.4%, industrial by 8.5%, and automotive by 5.1%. Despite this, recovery and long-term growth in automotive semiconductors are expected.
