

INTERNATIONAL news **Onsemi invests \$2 billion in Czech semiconductor expansion**

American chip supplier Onsemi has invested up to \$2 billion in a new silicon carbide manufacturing facility in Roznov pod Radhostem, Czech Republic. This aims to meet global demand for advanced power semiconductors, enhancing efficiency in electric vehicles, renewable energy, and AI data centres. Aligned with the European Chips Act, the investment bolsters the region's semiconductor value chain and GDP. It reinforces Onsemi's supply chain resilience and leadership in intelligent power solutions.

Renesas acquires Transphorm for GaN technology

Renesas Electronics has acquired Transphorm Inc. to expand its GaN technology offerings for electric vehicles (EVs), data centres, AI, and renewable energy. This acquisition enables Renesas to provide GaN-based power products and reference designs for next-generation semiconductor applications. Renesas' strategy includes new investments in power technology, such as a dedicated wafer fab and a SiC production line. The addition of GaN technology supports Renesas' goal of delivering efficient, sustainable power solutions.

Google invests for 300MW of solar power panels in Taiwan

Google and BlackRock are collaborating to develop a 1-gigawatt pipeline of new solar capacity in Taiwan. This investment aims to power Google's data centres and cloud regions amid rising AI-driven power demand. Google intends to secure up to 300 megawatts of solar power from this venture, contributing significantly to Taiwan's local electricity grid's clean energy capacity. This investment aligns with Google's ambitious goal of achieving net-zero emissions across its operations and value chains by 2030.

Nexperia invests \$200M to expand in Europe

Nexperia, a Dutch semiconductor company owned by Chinese electronics manufacturer WingTech, plans to invest \$200 million in Germany to expand capacity at its main production site in Hamburg, Germany. This investment signifies Nexperia's commitment to producing two types of advanced 'wide bandgap' chips: silicon carbide (SiC) and gallium nitride (GaN). These chips, crucial for improving electrical infrastructure, represent a significant entry into the European market for Nexperia, without assistance from state subsidies under the EU's Chip Act introduced in 2023.

Altair to acquire metrics design automation for cloud-based simulation solutions

Altair is set to acquire all of Canadian design automation simulation-as-a-service (SaaS) provider metrics design automation outstanding capital stock and combine its software capabilities with the latter's cloud-based simulation tools. Metrics' digital simulator, DSim, will be integrated with Altair's silicon debug tools to create an affordable cloud-based simulation solution with

debug capabilities in the EDA and semiconductor space. DSim will be available through Altair One, Altair's cloud innovation gateway, and for desktop download.

BYD to establish a \$1 billion factory in Turkey

BYD has inked a significant agreement with Turkey's Ministry of Industry and Technology to establish a new manufacturing facility in Turkey, with an investment of over 1 billion (approximately ₹8330 crore) and includes the construction of the BYD Turkey plant, which will boast an annual production capacity of 150,000 electric vehicles. Additionally, the site will feature a research and development centre and a mobility centre. Production at this facility is expected to begin by the end of 2026, providing 5000 jobs locally.

EU imposes tariffs as high as 37.6% on Chinese EVs

The EU has initiated provisional tariffs on Chinese electric vehicles (EVs) starting July 4, as negotiations with China continue, with a November deadline to solidify these tariffs. These preliminary tariffs have particularly impacted SAIC, the owner of MG, who now faces an additional 37.6% tariff on the wholesale price of its imported EVs, a slight decrease from the initially proposed rate after negotiations. Other companies like BYD and Geely (which owns brands such as Lotus, Polestar, and Volvo) are subjected to additional tariffs of 17.4% and 19.9%, respectively.

Electric vehicle startup Fisker declares bankruptcy

Fisker Group Inc. has filed for Chapter 11 bankruptcy protection in Delaware District Court, citing failed negotiations with a major automaker and financial strain from launching its Ocean SUV. The company reported assets of \$500 million to \$1 billion against liabilities of \$100 million to \$500 million, with 200 to 999 creditors. Fisker's challenges included workforce reductions, production setbacks, regulatory scrutiny, and financial pressures amid sluggish EV demand and supply chain disruptions.

BII invests \$75M in Symbiotics' Green Bond

British International Investment (BII) has committed US\$75 million to Symbiotics Investment's second Green Basket Bond, expanding financial support for small-scale renewable energy projects in India, Africa, and Asia. This initiative will allocate half of the funds to India and help 10-15 additional MSME lenders. BII's technical assistance facility will also provide over \$460,000 to enhance climate financing capabilities, aiming to bridge a \$530 billion funding gap for green projects in India.

Realme partners with Sony for AI camera feature

Realme and Sony collaborate to bring AI-powered imaging to the new Realme 13 Pro Series 5G smartphone, featuring Sony's LYT-701 camera sensor. This collaboration marks the first use of Sony's LYT-701 in the Realme 13 Pro Series 5G. The device incorporates HYPERIMAGE+ technology with multiple lenses and periscope lenses for high-quality photography. The deal will empower consumers to capture and share their world in unprecedented ways. Launch dates for India and other markets will be revealed soon.

Analog Devices boosts India staff by 30%

Analog Devices has raised its sales and application team headcount in India by 30% over the past eight

months, according to Vivek Tyagi, managing director of Analog Devices India (ADI). The company anticipates significant growth in India's semiconductor market, which is expected to expand from \$2.7 billion

in 2024 to \$11 billion by 2030, with a 27% annual growth rate. It further aims for India to become one of ADI's top three markets, alongside North America, Europe, Japan, and China.
