

Out of the 87 startups, 20 are working in the electronics sector, including Aranya Paridhi Pvt Ltd, Azom Computer Systems Pvt Ltd, Benlycos Pvt Ltd, Bonv Technology Pvt Ltd, CarbonOut Techcom Pvt Ltd, Canectar Foods Pvt Ltd, EV Urjaa Pvt Ltd, Kairus Energies Pvt Ltd, Larkai Healthcare Pvt Ltd, Nishtula Instrument and Innovation Pvt Ltd, NyQuest Innovation Labs Pvt Ltd, Predulive Innovations Pvt Ltd, Primary Healthtech Pvt Ltd, Proximal Soilsens Technologies Pvt Ltd, Qzense Labs Pvt Ltd, Raana Semiconductors Pvt Ltd, Robro Systems Pvt Ltd, Thinkraw Innovative Solutions Pvt Ltd, Waterbot Online Solutions Pvt Ltd, and Zylm Energy Pvt Ltd.

How many electronics hardware product startups are part of this programme?

We do have three-four startups purely focused on electronics. However, with a focused push towards establishing India as a product manufacturing nation under the Make-In-India initiative, we anticipate this number to radically scale up in the very near perceivable future.

What steps can be taken to support and encourage electronics hardware product design startups in India?

Electronics hardware product design differs significantly from software development, often requiring longer gestation periods. Hardware startups need extensive lab facilities for design, manufacturing, and testing. We have 24 STPI Labs across the country, two dedicated to the electronics domain. The Telangana government has established T-Works to boost prototyping of electronic products. We aim to establish more incubation centres and Centres of Excellence (CoEs) focused on electronics hardware, offering state-of-the-art facilities, mentorship, and industry connections. Such institutions are needed across the country.

Additionally, implementing specialised training programmes to develop a skilled workforce proficient in electronics hardware design and manufacturing will further boost the sector. There should be a concerted effort to foster partnerships between electronics hardware startups and established companies to promote knowledge transfer, co-development of products, and market access. As India aims to present itself as a global power in the tech product sector, increasing funding for R&D in electronics hardware and encouraging collaborations between startups, academic institutions, and industry players is imperative. This will help create platforms and opportunities for startups to showcase their products globally, connecting them with international investors and customers. **EFY**
