

Automotive microcontrollers

The Lumissil Microsystems IS31CS9310 is designed for industrial use, while the AEC-Q100 grade-1 IS32CS9310

targets automotive applications. Both feature an 8x12 LED matrix driver with eight PMOS switches and

twelve PWM-controlled 80mA current sinks, offering 4096 LED brightness levels and 256 matrix control levels. Applications include automotive dashboards, industrial control panels, and interactive displays.

Brake pedal sensors with wake-up switch

The MLX90424 sensor from Melexis integrates dual position-sensing ICs with a wake-up switch in a single

package, enabling accurate 30mm linear displacement measurement powered directly by a 12V battery. Ideal for compact automotive brake systems, it enhances functional safety while consolidating position-sensing and switching functions, reducing component needs and simplifying design. Using Triaxis hall technology, it resists magnetic interference, meeting AEC-Q100 and ISO 26262.

Modular DC link capacitors

TDK Corporation has introduced the xEVCap, a modular DC link capacitor designed for powertrain inverters

across vehicles and machinery tools. Traditional capacitors require custom designs, increasing devel-

opment time and costs, particularly for small production runs. Applications include traction inverters in passenger and commercial vehicles, off-highway vehicles, and machinery tools. The company claims that the capacitors are compatible with SiC and GaN semiconductors.

High-voltage photorelay

Toshiba's automotive-grade photorelay, the TLX9150M, is tailored for high-voltage battery management systems in electric vehicles (EVs). Engineered

for 400V EV batteries, it can endure up to 900V, ensuring safety and reliability in demanding conditions. Its compact

SO12L-T package optimises space in EV systems while offering robust voltage isolation. With applications in battery voltage monitoring, ground fault detection, and mechanical relay replacement, this photorelay enhances battery performance, extending EV range and efficiency.

GaN power transistors

Infineon Technologies AG has introduced CoolGaN transistors 650V G5. The transistors are suitable for various

applications like USB-C adaptors, chargers, televisions, power supplies in industrial

equipment, lighting solutions, power systems in data centres and telecom, and in renewable energy systems like solar and wind energy, as well as in household appliances.

Multi-gigabit Ethernet switches

Microchip Technology's LAN969x multi-gigabit Ethernet switch family and VelocityDRIVE software platform

(SP) help automotive OEMs meet rising demands for high-bandwidth, secure, and feature-rich networking. The SP is an Ethernet switch software platform with a configuration tool based on standardised YANG models, making it the first to integrate CORECONF YANG, simplifying design and cutting costs. Supported by the LAN9692 evaluation board, the switches are available now.
