

systems in various fields like automotive, industrial, consumer, and medical. HMIs enhance user interactions, while gateways bridge diverse

networks, supporting edge computing. iWave's i.MX 93 system on module (SoM) is ideal for developing industrial HMIs and gateways, with energy-efficient processing and machine learning at the edge. With the ARM Cortex-A55 core, high-speed interfaces, and support for Linux and RTOS, it offers robust performance across hardware, OS, middleware, and HMI layers, ensuring real-time communication and multimedia processing.

LoRaWAN radio module

The LR-11 board, centred on Ezurio's 453-00139R module from Mikroelektronika, features a Silicon Labs

EFR32 processor and Semtech SX1262 radio. It includes a FlexDipole antenna for 868/915MHz operation, ideal for IoT, smart

home, and industrial automation applications. Supporting LoRaWAN classes A, B, and C over 902MHz-928MHz, it delivers up to 22dBm output, reaching up to 15km in range. An extra mikroBus socket enables peripheral integration, such as sensors and displays, via UART, SPI, or I2C. With unicast and broadcast for up to 64 devices, it is highly suitable for asset tracking, automation, and IoT projects.

Medical-use power supply

The EIRE300 by Vox Power is a compact, open-frame 300W power

supply offering high efficiency (up to 95%) with a 2.4cm profile and 10.1cm × 5.08cm footprint, supporting

demanding applications like medical and industrial equipment.

With a power density of 37.5W/in³, it peaks at 375W and runs at 200W using convection cooling at 115V AC, ideal for patient monitors, surgical tools, and industrial controls. It features 2x MOPP isolation, dual-line fusing, remote sensing, and an AC_OK signal, meeting medical safety standards.

LED driver module for rail

RECOM has launched the RACV22-24SW, a 22W LED driver module designed for rail applications. It is made to be installed once and does not

need frequent maintenance, suitable for powering sensors, control

units, and track lighting. This driver can handle an AC input and gives a steady 24V DC output with high efficiency. It works well in temperatures from -30°C to +50°C, making it suitable for outdoor use.

Microcontroller development suite

The Keil MDK Nuvoton Edition by Nuvoton Technology, Taiwan, offers a

powerful microcontroller development suite, including the ARM C/C++ compiler, Keil µVision IDE, and Keil Studio

Pack for Visual Studio Code. This toolkit, part of Nuvoton's 'NuDeveloper ecosystem,' simplifies embedded development with streamlined access to professional tools. Supporting a range of microcontrollers from entry-level M0/M0+ to high-performance M85 cores, it accelerates development in fields like industrial automation, AI, and consumer electronics.

MANUFACTURING EQUIPMENT

3D automated X-ray inspection system

Test Research, Inc. (TRI) has launched the TR7600 SIII Plus, a 3D SEMI CT automated X-ray inspection (AXI) system designed for high-reliability

industries, including semiconductors and advanced packaging. Equipped with ultra-fast line-scan CCD cameras and an adjustable X-ray source (60-110 kV),

this system supports resolutions from 2µm to 20µm for high-precision defect detection. The TR7600 SIII Plus inspects large PCBs up to 800mm × 350mm and integrates with Smart Factory MES systems, adhering to standards like IPC-CFX and IPC-HERMES-9852, crucial for applications in automotive, aerospace, and medical sectors.

TEST & MEASUREMENT

Arbitrary waveform generator cards

AWG cards produce high-frequency waveforms with minimal distortion and a 16-bit resolution for clear signals. With up to 8 GigaSamples of memory and 10GB/s data transfer,
