

they support demanding applications like telecommunications research,

electronics testing, signal processing, and communications development. Modes include single-shot, repeated, and multi-

ple replay, with two external trigger lines for precise control. Using the Star-Hub module, up to eight cards can synchronise, generating waveforms on 16 channels at 5GS/s.

Digital zoom microscope

JB Instruments introduces the JBM-UM08i, an advanced digital microscope with electric zoom, autofocus,

and 4K HDMI/USB connectivity. Featuring an 8MP Sony Starvis CMOS sensor, it delivers 60fps video output,

ensuring sharp images and high-speed performance. Its 18X zoom ratio, spanning 1X to 18X, offers a working distance of 250mm and a field of view from 255mm × 145mm (1X) to 14.2mm × 8mm (18X). Designed for industrial, medical, and research applications, it supports SD/USB storage and integrates JBMS View software for measurement and control.

Neural network platform

Liquid Instruments has enhanced its Moku platform by incorporating artificial intelligence through the new Moku neural network,

enabling machine learning applications in signal analysis, denoising, and sensor conditioning. The platform leverages powerful field-programmable gate arrays (FPGAs), integrating lab tools like oscilloscopes and lock-in

amplifiers. Users can develop neural networks using Python on Moku:Pro, with support for applications requiring sub-microsecond latency and up to five fully connected layers. To aid users, Liquid Instruments has introduced AI Help, a GenAI tool for product support.

Computer vision, GenAI, NLP tools

Hinton, launched by Bengaluru-based SmartSoC AI Studio, offers tools for computer vision, generative AI (GenAI), and natural language processing (NLP)

tailored for industries integrating real-time AI. The platform's voice-guided interface simplifies complex AI tasks, enabling non-technical users across sectors to harness advanced EdgeAI without specialised skills. Key features include deep learning utilities, EdgeAI tools for deploying and monitoring AI on edge devices, and an AI-driven EDA suite for semiconductor design.
