

amount of valuable electronic waste—just 3% of the total weight. Additionally, the composition of materials changes frequently due to technological advancements, which requires continuous adaptation of recycling processes. Efficiently extracting precious metals, achieving 90% efficiency for gold, and ensuring high purity levels, such as 99%, demands constant research and development (R&D).

What R&D initiatives does Recyclekaro undertake to improve its recycling processes?

Our R&D team, comprising PhD holders and IIT graduates, optimises extraction processes based on new materials and battery chemistries. Our patented method now extracts lithium carbonate at over 90% efficiency and 99% purity—up from an initial 35%. We

are working to further enhance this technology.

What is Recyclekaro's revenue model, and how do you handle client payments?

We focus on procuring e-waste and battery waste, processing it, and then selling the recovered metals to industrial clients. Our payment model is straightforward—payments are made upfront or against the truckload when we procure waste. Revenue is generated from the sale of recovered metals from e-waste and lithium-ion battery scrap. Last financial year, our combined revenue from e-waste and battery recycling was 1.26 billion. For the current year, we project that revenue will exceed 2.1 billion, reflecting our expanding operations and increased demand for recycled metals, particularly in industries such as electric

vehicle manufacturing.

What are Recyclekaro's plans for technology and market expansion?

One of our key initiatives is developing a nickel metal manufacturing plant, where we aim to produce 100 metric tonnes of nickel each month. This step is significant as it will support India's rapidly growing battery manufacturing industry, particularly with the rising demand for electric vehicles. Alongside our efforts in India, we are exploring opportunities to establish partnerships in Europe, which will enable us to expand our operations globally. These align with our long-term vision of leading the global recycling industry. We are excited about the potential impact these advancements hold, not just for our company, but for the industries we serve and the environment. **EFY**

Wanna Be Your Own Boss?

DO OPEN SOURCE.

www.opensourceforu.com

Demand for Open Source is sky rocketing. Be it for managing IT infrastructure or development of software—Open Source solutions are what customers are seeking.

All you need to do is develop expertise in an Open Source stack, and then build a team around it!

And, Open Source For You can be your friend and a guide through this journey.
