India's RE Sector Soars, Solar and Wind Capacity Smash Records

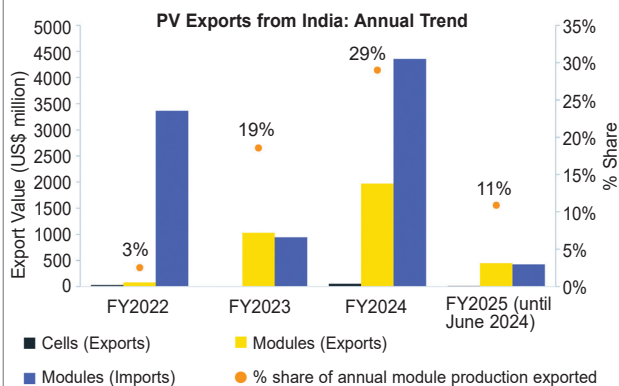

India's renewable energy sector saw record growth in 2024, with solar capacity reaching 17.4GW, a nearly 106% YoY increase, and wind capacity adding 2.6GW, up 14.8%. Solar continues to lead, contributing 45% of the total renewable capacity, while wind accounts for 23%. Projections suggest that in 2024, we could see over 20GW of solar and 3GW of wind installations.

Export Value of Indian PV Modules Rises 23 Times in Two Years

India has recorded a significant increase in high-efficiency PV modules compared to the US with the export value of PV modules rising exponentially by more than 23 times in just two years between FY2022 and FY2024. The majority came from the three largest domestic PV manufacturers—Waaree Energies, Adani Solar, and Vikram Solar—each of which exported more than half of its annual actual production in FY2024. India also imported a record \$6.2 billion worth of PV cells and modules from China-based manufacturers in the same year.
