

XENO+ ML SOM Modules

- The XENO+ ML (Machine-Learning) SOM (System-On-Module) modules are production ready solderable SOM modules and can be used as core CPU module of any new Battery powered intelligent and secure IoT/AI/ML devices.
- These SOM modules bring together AI and Deep Learning capabilities with WiFi/BLE/ LTE/ NB-IoT/LoRa connectivity.

Key Benefits

The key benefits of XENO+ ML SOM modules are,

- The customers can save up to 40% of hardware and software development time.
- The Software SDK offered along with ML SOM modules helps the Customers with reduced Embedded SW development time.
- Common pin mapping across all XENO+ ML SOM modules brings SW compatibility among all connectivity variant devices.
- The customers can leverage FOTA feature offered with XENO+ ML SOM to upgrade MCU • Application binary, ML Model binaries and Modem binaries.
- Common Pin mapping of XENO+ ML SOM Modules

Common Pin mapping of XENO+ ML SOM Modules

The customers can first start with IoT use cases and upgrade with ML use cases on the same device in future.

Common Pin mapping across all modules and thus Brings SW compatibility among all connectivity variant devices.
