STH electrolytic capacitors

New Yorker Electronics has introduced Vishay's line of hermetic glass-to-metal seal tantalum capacitors, designed specifically for avionics and

aerospace applications. These STH electrolytic capacitors are renowned for their exceptional reliability, demon-

strating remarkable resilience against military-level shocks and vibrations, all the while enduring rigorous thermal shock cycles. The STH capacitors represent a cost-effective alternative to Hi-Rel wet tantalum capacitors, making them a versatile choice for a wide range of applications, including power supplies, actuators, transponders, radio, radar, missiles, oil drilling equipment, and underwater systems. Their design prioritises high reliability in avionics and aerospace settings, featuring various termination options, including axial and standard tin/lead (SnPb).

High-frequency photo relays

Toshiba Electronics Europe GmbH introduces the TLP3475W photo

relay, targeting high-frequency signal applications, specifically semiconductor testing like high-speed memory, logic testers, and probe cards. Its diverse applications encompass

measuring instruments, high-speed memory testers, high-speed logic IC testers,

automatic test equipment (ATE), and probe cards, showcasing its versatility. Features include a low 3.0mA LED drive current, 1.1Ω on-state resistance, over 300Vrms isolation voltage, and less than 20pF output capacitance for approximately 2ms switching times. It comes in a compact WSON4 package, operates with a normally open configuration, and is suitable for industrial use.

EMBEDDED

Intel Core Ultra processor modules

Congatec unveiled a new series of COM Express Compact modules featuring Intel Core Ultra processors. These modules offer diverse compute engines, including CPU, GPU, and NPU for efficient AI workloads at the edge. The integrated NPU, known as Intel AI Boost, simplifies AI workload integration, reducing system complexity and costs. These modules find applications in surgical

robotics, medical imaging, diagnostic systems, and industrial settings such as inspection systems, robotic arms, and autonomous vehicles. They benefit from an OEM ecosystem with cooling solutions, evaluation boards, real-time hypervisor technology, and various service offerings.

Arm Cortex-M85 processors

Renesas Electronics Corporation has introduced its RA8D1 microcontroller (MCU) lineup, featuring the Arm Cortex-M85 processor, delivering enhanced performance and advanced

security features. These MCUs offer versatile peripheral capabilities suitable for a wide range of applications, including high-resolution graphics support and external memory interfaces. Furthermore, they incorporate professional-grade graphics software solutions, extended support for open source libraries, and an extensive graphics evaluation kit. The bundled software package includes RTOS, BSP, drivers, middleware, connectivity, and robust security features, catering to AI, motor control, and cloud solutions development. This ensures smooth integration of legacy code and preferred RTOS systems.
