

Quad-band GSM/GPRS communication modem

Rajguru Electronics presents the ADIY SIM800C LM39302 TTL board, a versatile communication solution

incorporating the Quad-Band GSM/GPRS engine SIM800C, offering seamless operation across frequencies

like 850/900/1800/1900MHz. The LM39302R-ADJ 3.0A linear voltage regulator provides efficient low-voltage, high-current output with minimal external components. Key features include adjustable baud rates, compliance with ESD standards, and input voltage acceptance from 5-20V. This modem performs audio calls, SMS handling, internet access, and more through simple AT commands. It supports MIC and speaker sockets, features a user-friendly Nano SIM card holder, and includes UFL/SMA connector antennas for enhanced connectivity. AT commands enable easy baud rate configuration, while an internal TCP/IP stack simplifies internet connectivity via GPRS, making it suitable for various M2M interface applications.

Development board with CPU and FPGA capabilities

Eldaas introduces the elSoM-5EV, a compact system on module (SoM) uniting CPU and FPGA processing capabilities,

with high-speed board-to-board connectors, measuring 60mm by 50mm, and

featuring 143 pins on the development board (elDB-5EV). It caters to a range of applications, including surveillance, smart vision, image manipulation, graphic overlay, human-machine inter-

face, video processing, and interactive display, with notable features such as Xilinx UltraScale+ MPSoC XCZU5EV, memory options, compact size (94mm x 63mm), wide industrial temperature range (-40°C to +85°C), compatibility with various operating systems.

128GB memory board

Micron Technology, Inc. launches a 32Gb monolithic die-based 128GB DDR5 RDIMM memory module for data centre and cloud applications, including AI, in-memory databases,

and general compute workloads. The performance is driven by Micron's 1β technology, offering

over 45% improved bit density, up to 24% better energy efficiency, up to 16% reduced latency, and up to 28% enhanced AI training performance compared to other 3DS through-silicon products. The DDR5 memory solution maximises array efficiency and power delivery network optimisation through voltage domain and refresh management features. Micron's 128GB RDIMMs come in speeds of 4800MT/s, 5600MT/s, and 6400MT/s, catering to compute-intensive workloads in data centres.

MANUFACTURING EQUIPMENT

Component inspection tool

The Keyence Digital Microscope VHX 7000 is a groundbreaking development in microscopy, providing users with a 6000x zoom for electronic component inspection, particularly semiconductor devices. This tool enables detailed analysis and real-time inspection report generation. IC packages vary for different applica-

tions, from insertion-type packages for PCBs with leads on one side to DIP packages with leads on both

sides. Electrical inspections in electronics deploy methods such as current flow and high-frequency

measurements, with probe cards and contact probes being crucial for inspecting components from semiconductors to PCBs. The introduction of advanced microscopes has transformed the industry, facilitating precise inspections and aligning with the evolving needs of technology.

Component counting machine

Sciencscope has unveiled the AXC-800 III, an advancement in component counting technology. It has a 99.9% accuracy rate; this system seamlessly integrates with Manufacturing

Execution Systems, providing real-time results and facilitating automatic label generation. Its efficiency is evident in simultaneously scanning four 18cm

reels, ensuring a rapid process and a turnkey operation requiring only a brief 5-minute training session.

The system's versatility extends to scanning JEDEC trays and precisely counting BGA balls. Internal barcode scanning eliminates potential errors, and the automatic label printing and pasting enhance overall efficiency. The integrated micro-focus X-ray source and a robust industrial PC running Windows 10 ensure precise and controlled imaging, contributing to the machine's overall performance and reliability.
