WIRELESS

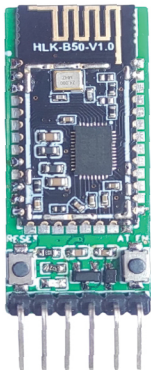

modules

ADIY Bluetooth devices are indispensable in many applications and with BLE versions consumes low power as well. The latest versions also have ARM cortex processor supporting high-performance and with rich output pins such as UART, I2C. The dual mode helps for faster data transmission with encryption providing security to the data.

...

While Wi-Fi is another popular mode for transmitting & receiving data. A versatile IoT based module which can provide seamless connectivity with fast data speed reckoning the possibility of myriad applications. ADIY wireless modules utilizing latest features will surely be trendsetter for networking related usages.

...

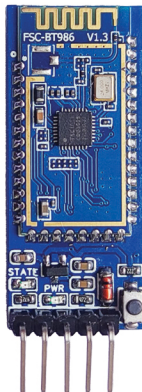

ADIY B50 Bluetooth Module

ADIY HLK-B50 TTL is a BLE5.0 dual-mode Bluetooth-serial port transparent transmission module, which can support Bluetooth SPP and GATT transparent transmission at the same time. Master-slave integrated Bluetooth BLE 5.0, can be set as master or slave mode. Various devices with serial ports can be easily and quickly transmitted through this module.

BLE 5.0 dual-mode Bluetooth module

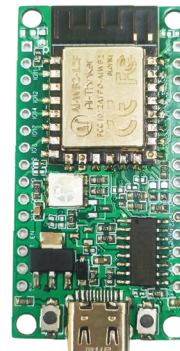

Baud rate up to **921600**

ADIY BT986 Bluetooth Module

ADIY BT986 TTL is a high performance, highly integrated Bluetooth 5.2 BR/EDR/BLE, designed to operate on the **2400MHz to 2480Mhz** ISM frequency band. Abundant peripherals, power-on reset and UART, arithmetic accelerators further reduce the cost and size of the entire system. Support communicating with the FeasyBlue app and many other Bluetooth apps. By default, Feasycom standard firmware is built-in, and customized firmware is also available.

Bluetooth 5.2 Classical/BLE
(Dual mode version)

ADIY Ai-WB2-12F CH340 Module

ADIY Ai-WB2-12F Board is a Wi-Fi & BT module developed by ADIY in India. The module is equipped with BL602 chip as the core processor and supports Wi-Fi 802.11b/ g/n protocol and BLE 5.0 protocol.

Interfaces: UART/ GPIO/ ADC/ PWM/ I2C/ SPI I/O

UART: rate Default value:
115200 bps

Available with **CP2102**
and **CH340C**
