

THE DASHBOARD

India to Lead Overall Global Premium Smartphone Market Growth

The global premium smartphone market, devices with a wholesale price of \$600 or more, is forecasted to grow by 6% year-on-year (YoY) in 2023, reaching a new record high. India is seeing the fastest-growing premium market globally. Apple experienced significant growth in India, recording a 34% YoY increase. Q3 2023 was Apple's best quarter for shipments in India, surpassing 2.5 million units. China, MEA, and Latin America are also expected to set new records for premium market sales.

Global Smartphone Shipments Rise 8% YoY After Seven Quarters of Decline

Worldwide smartphone shipments saw an 8% year-on-year increase in Q4 2023, reaching 320 million units ending a streak of seven consecutive quarters of decline. Overtaking Samsung, Apple led this quarter's market with a 24% share in shipments, boosted by its new iPhone launches.

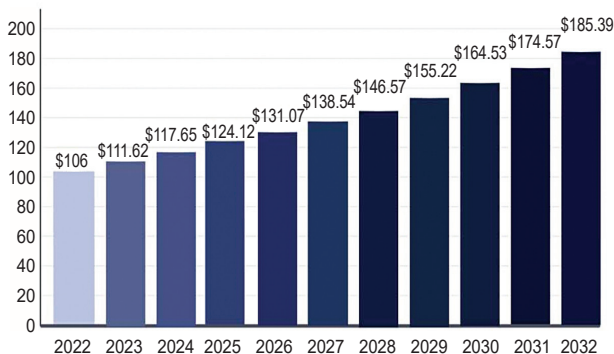

Improved demand during the holiday season was a major boost. The recovery is driven by products in the mid-to-low-end price range, supported by improved demand in emerging markets, including the Middle East and Africa, Asia Pacific, and Latin America.

MPU Market to Reach \$185.39B by 2032 Following Smartphone Growth

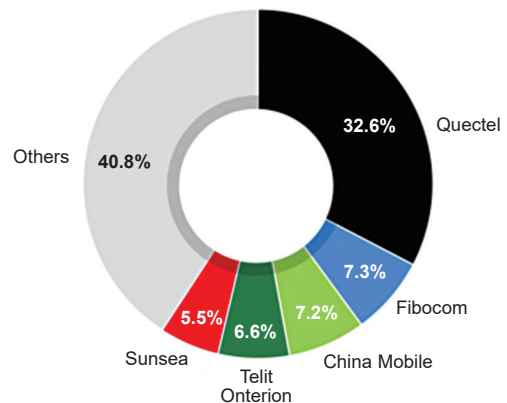

The global microprocessor market is projected to rise to \$185.39 billion by 2032 at a compound annual growth rate (CAGR) of 5.8% from 2023 to 2032, with Asia-Pacific market leading. India, which is second only to China in the number of smartphone users, has signed five MoUs with entities like Sony India, ISRO, and BEL to enhance the use of domestically developed Shakti and Vega RISC-V microprocessors. The increase is attributed to the expanding utilisation of microprocessors in smartphones and their growing application in healthcare electronics.

Indian Cellular IoT Module Shipments Record Positive Growth in Q3, Global Shipments Fall

India was the only region with positive growth in the global cellular IoT module market while markets outside China and India experienced a steeper decline. The global cellular IoT module shipments for Q3 2023 recorded a 2% year-on-year (YoY) decline. This downturn is attributed to weaker demand, rising interest rates, and cautious spending among enterprise IoT players.
