

industrial applications such as servo drives, switched-mode power supplies (SMPS), servers, and telecom equipment. The CCPAK packaging technology reduces parasitic losses, improves electrical and thermal performance, and enhances device reliability. The GaN technology also reduces die size and achieves a low RDS(on) of 33mΩ at 25°C.

Mid-range FPGA families

Lattice Semiconductor has introduced a new expansion to its FPGA portfolio, unveiling the Avant-G and Avant-X families. The primary objective is to deliver heightened performance, reduced power consumption, and a

competitive edge for programmable logic devices. Positioned as a versatile, mid-range FPGA solution, the Avant-G series caters to a wide range of applications, while the Avant-X series is tailored for the burgeoning field of networking. These FPGAs, ranging in size from 11x9mm to 15x13mm, are designed for compactness and space efficiency, aligning with market demands.

Quarter brick DC/DC converter

Flex Power Modules has launched the PKM8100A, a quarter-brick, baseplate-cooled DC/DC converter designed to

meet the demands of a wide range of applications. It delivers a robust 100 watts of power with an efficiency rating of up to 89%. It has versatility in output options. The DC/DC converter comes fully equipped with comprehensive features, including remote control,

output trim, and remote sensing, providing users with flexibility

and control over their power solutions. It incorporates advanced protection mechanisms such as over-temperature, input under-voltage lockout, and output over-voltage and short-circuit protection, enhancing the reliability and safety of the product. Designed in the industry-standard quarter-brick format and equipped with through-pin connections for easy integration.

400W DC/DC converters

RECOM has expanded its lineup of DC/DC converters for mobility applications with new models delivering a 400W output. It includes an on-board DC/DC converter designed

for e-mobility and industrial vehicles. They provide full power at ambient tempera-

tures of up to 85°C and are water and dustproof (IP69K), ensuring reliability. They also offer high and constant efficiency. These converters are designed for on-board power conversion in mobility and industrial vehicles, even in

exposed areas. All components have an IP69K rating, ensuring protection against water and dust.

Compact global shutter imaging sensor

STMicroelectronics has launched a compact global shutter image sensor measuring 2.7mm × 2.2mm. It offers a native 800 × 700 pixel resolution, low power consumption, and high frame rates. This sensor is ideal for various applications, including eye-tracking

and motion estimation, with event-like image streaming.

The sensor

leverages advanced semiconductor processes, resulting in a leading pixel size of 2.16μm, improving sensitivity and reducing crosstalk. It incorporates deep trench isolation (DTI) for low parasitic light sensitivity (PLS), high quantum efficiency (QE), and minimal noise. With I3C control for faster communication, multiple auto-exposure modes, high-framerate operation, flexible tone mapping, and more, it enhances image capture capabilities.
