

Rajguru Electronics (I) Pvt. Ltd.

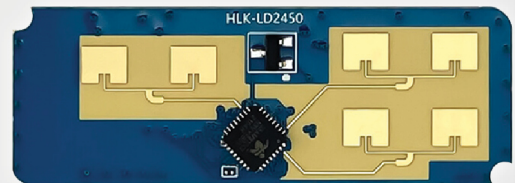

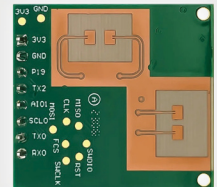

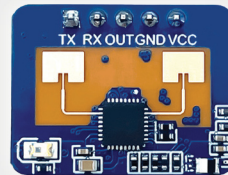

An ISO 9001:2015 Certified Company

RADAR SENSORS

Hi-Link Radar Sensor achieves high sensitivity human body state sensing and can recognize motion, micro motion, and stillness of the human body and calculate auxiliary information such as target distance and speed by utilizing FMCW (Frequency Modulated Continuous Waveform) radar signal mechanism and intelligent algorithm firmware which can support myriad applications.

Applications: Health Control- Respiratory Rate Monitoring, Human Persistence Monitoring, Gesture Recognition, Low Power Carpark Monitoring, Smart Home, Security, Lighting, etc.

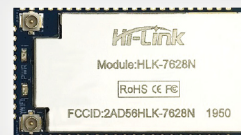

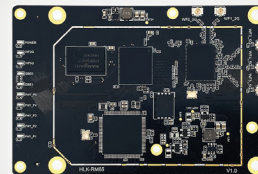

IoT/ BLUETOOTH MODULES

IoT based Bluetooth and Wi-Fi modules from Hi-Link manufactured using advanced silicon process are versatile and can be applied as an SoC (RM65) or low-cost embedded solution (RM08k).

Upgraded technologies (e.g.: BLE v5.0 for HLK-B50), flexibility (Abundant Interfaces) & customization in development along with low cost and low power consumption makes these small devices very powerful.

Applications: Smart Home Automation, Toys, Smart Agriculture, Routing Gateways/ Home Routing, Smart card terminals, Wireless POS, handheld devices, etc.
