

COMMERCIAL EV FINANCE: Empowering Younger Companies To Drive Growth

Based on the first episode of MOVES Ecosystem Dialogues, the above piece is by **AMITABH SARAN**, CEO & Co-founder of Altigreen

While electric three-wheelers have emerged as the face of EV adoption in India, startups engaged in their retail need increased access to finance for scaling up. Will the market become more challenging for such startups as heavyweights like Mahindra, Piaggio, and Bajaj leverage their captive finance arms to offer financing options?

Three-wheelers impact a vast population, with over 400 million people relying on them daily. They serve as a primary mode of transportation across numerous states, cities, provinces, and districts, notably being the largest diesel consumers. Transitioning this segment to electric can make a significant environmental difference.

There is an undeniable need for electric three-wheelers in primarily semi-urban and semi-rural scenarios, regardless of whether these areas are labeled as tier 1 or tier 2.

While infrastructure may be lacking in some areas, targeting regions with a reliable power supply is feasible. Offering month-long trials allows consumers to experience the benefits firsthand, such
