

ENTREPRENEURS' CRASH COURSE

For Strategic Visibility

The hustle for visibility is not just about speed, it is also about the right direction. Visibility demands strategic pacing. Assess, pivot if needed, and then sprint

In the last ten articles, we covered several aspects of business assets, what to build, why, and how to do it. One of the assets we discussed was related to visibility.

Coincidentally, as we run a docuseries (documentary-series) on the 'Visible Founders,' I had this experience up close and personal in many instances. It is about how businesses, especially startups and small-to-medium-sized companies, approach this opportunity. Many people treat it like a paid marketing opportunity, and that is where it gets set up to eventually fail. The fundamentals are missed, basic common minimum expectations are misunderstood, and, more

importantly, things start moving faster but in the wrong direction.

Here are seven reasons why that happens and how to fix it.

The business is new or in a startup phase

This does not necessarily mean that the company is only a few years old. It also indicates the mindset, approach, and operating style of the business. I have seen several businesses that have been active for seven to eight years but still have not found the product-market fit. They still run like an experimental company.

The key is having a product-market fit as well as having a decent customer base. If it is not there, or you are not sure of it, that is going to be an asset you would want to build first.

The business does not have an optimised foundation

When I say foundation, I am talking about online as well as offline. For example, many businesses do not have optimised websites and online sales channels. In some cases, their supply chain or delivery chain is still weak or underweight. What it means is that when visibility kicks in and an influx of inquiries starts, they are likely to
