

Are you also taking non-performing assets into consideration?

At the moment, we are only working with fleet owners and not individual owners. The minimum number of vehicles per fleet for us is five. In the NPA part, we address the same with a calculative approach, which includes understanding the reason behind an asset becoming an NPA. If we are unable to continue operations with a particular fleet owner, we refurbish the vehicles and deploy them to a new fleet owner.

Which geographies of India are you present in?

We are operational in 27 cities in India, which include Tier 1, 2, and 3 geographies and regions. These include places like Surat, Coimbatore, Bareilly, Varanasi, and more. We are now getting a lot of collaboration requests from vehicle makers. A lot of Tier 2 and 3 cities are opening up for this demand.

What is the process for onboarding vehicle makers?

One of the prime requirements is that of data integration. This means that the vehicles they make should be able to generate and send data. The second is service integration. There must be a proper process for handling services and spares. In case of a vehicle requiring service or spare change, the vehicle maker needs to facilitate the spare parts to the service partners authorised by us. Fleet owners trying to do the same via a dealer is usually an inefficient process.

Is the availability of financing funds required for electric vehicles still persistent in India?

While it is still a challenge, it is now a smaller one. If a fleet owner wants to expand their base from Haryana to Uttar Pradesh, Amphion can provide financing for the same. This is also a challenge that we are working to address. There are multiple financiers and dealers working with us. They are helping us solve the challenge.

What kind of EVs is Amphion managing at the moment?

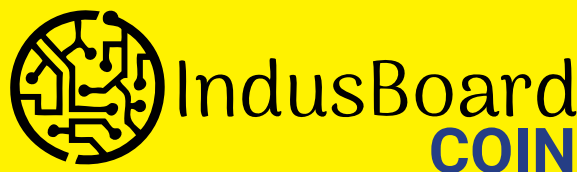

Our platform is managing four-, three-, as well as two-wheelers. Four-wheeler EVs constitute a very small share as there are not many available in the commercial EV category. The rest is split equally between two- and three-wheeler EVs. We are targeting to manage assets worth over ₹5 billion by the end of this fiscal. **EFY**

An “AWESOME” Development Board from India?

- **Super Small:** 3 centimeters
- **Super Smart:** 3 processors
(Xtensa® Microprocessor + 2 ULP RISC-V Coprocessor)
- **Super Sensitive:** 4 Sensors
- **Super Connected:** Wifi & 10+ Interfaces
- **Super Flexible:** 30 GPIOs
