## India PC Market Records 2.6% Growth YoY in Q1

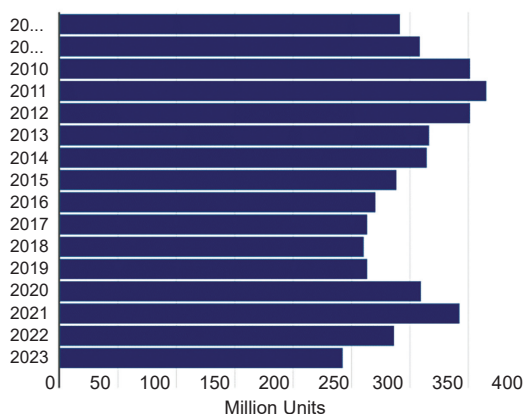

The India PC market grew by 2.6% year-on-year in the first quarter of 2024, with a total of 3.07 million units shipped. Desktop PCs and laptops contributed to the overall increase by 10.1% YoY and 2.7% YoY growth respectively, while notebooks declined by 1.7% YoY. Reduced PC procurement from the IT/ITES sector and global accounts, which traditionally drive significant volumes, is raising major challenges in growth. The market is expected to start recovering by the end of 2024 with fresh buying from the enterprise segment.

| Company           | 1Q 2024 Shipments | 1Q 2024 Market Share | 1Q 2023 Shipments | 1Q 2023 Market Share | YoY Unit Change (1Q 2024 vs 1Q 2023) |
|-------------------|-------------------|----------------------|-------------------|----------------------|--------------------------------------|
| HP Inc.           | 923               | 30.1%                | 1012              | 33.8%                | -8.8%                                |
| Dell Technologies | 537               | 17.5%                | 417               | 13.9%                | 28.8%                                |

## Global PC Shipments Reach 15-Year Low, Down by 15% YoY

Global PC shipments have sharply declined by more than 100 million units over the past two years, reaching a 15-year low of 242 million units in 2023, primarily due to decreased consumer demand. Factors contributing to the decline include reduced consumer interest in PCs and global economic uncertainties. Despite a slight recovery in the third quarter with 68.5 million units shipped, the overall year-on-year decline was 15%. The decline has prompted industry players to reconsider their strategies, including diversifying production beyond China.

## India Smartwatch Market Records First Ever Stagnated Quarter

India's smartwatch market experienced stagnation in Q1 2024, with shipments increasing only by 0.3% year-on-year, marking the first time the market has not seen significant growth. The combined market share of the top three OEMs dropped from 77% in Q1 2023 to 66% in Q1 2024.

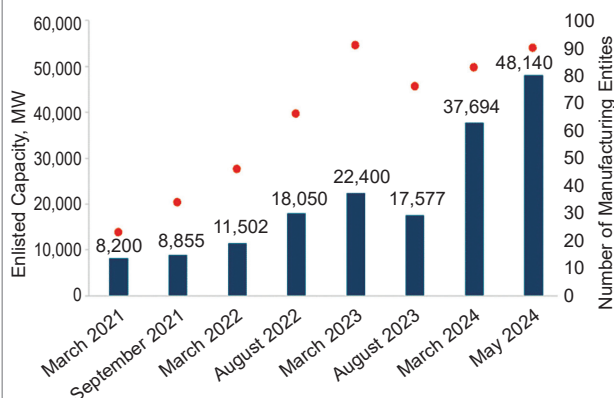

The market is expected to decline by a double-digit percentage in 2024, reflecting consumer reluctance due to limited differentiation and innovation. Analysts predict a recovery post-2026 as newer use-cases emerge, though growth rates will be slower.

## Approved List of PV Module Manufacturers Grows Twofold YoY

The Ministry of New and Renewable Energy (MNRE) updated the ALMM (Approved List of Models and Manufacturers) in May 2024, listing 861 photovoltaic (PV) modules from 90 manufacturers, totaling 48.1GW, of which 72% of these modules are classified as high-efficiency technologies. After a pause until March 2024, ALMM enlistments have surged, showing over twofold year-on-year growth.
