

MeitY plans billion-dollar subsidy scheme for components manufacturing

The Ministry of Electronics and Information Technology (MeitY) of the government of India plans to introduce a substantial subsidy scheme in August-September aimed at incentivising electronic component manufacturing, with an estimated expenditure of ₹300 billion. The proposed subsidies will primarily target acquiring land for factories in categories where the investment-to-output ratio is comparatively low. It will reportedly replace the SPECS scheme, focusing on high-value electronic component categories and will not follow the PLI scheme format strictly. MeitY is consulting with NITI Aayog and the Finance Ministry, with further industry stakeholder discussions expected.

Government to revamp PLI scheme to boost telecom manufacture

The government of India's Department of Telecommunications (DoT) plans to overhaul the PLI scheme to boost telecom equipment exports, and integrate more MSMEs, aiming to enhance the country's manufacturing ecosystem and meet global demand, particularly

in 5G. With over ₹10 billion in surplus funds, the DoT seeks to expand the scheme to cover a wider range of network equipment beyond its initial objectives. Discussions are ongoing for the scheme's expansion, with stakeholder consultations expected soon.

FAME 3 likely to launch on budget day with ₹100 billion budget

India is preparing to launch FAME 3, allocating approximately ₹100 billion to support electric vehicle adoption, on Budget Day, to boost stringent manufacturing capacity requirements. The policy has been pro-

posed to Ministry of Heavy Industries and includes subsidies up to ₹10,000 for E2Ws and ₹50,000 for E3Ws. It excludes subsidies for E4Ws and focused on local manufacturing.

PEOPLE (on the move)
