

Could you describe the business operations of Numato?

Headquartered in India, under the umbrella of Numato Systems Private Limited, we have two business segments—Numato Lab and Numato Circuits. Established in 2011, Numato Lab focuses on development and online sales of embedded-based electronic boards/modules. Numato Circuits is dedicated to EMS. We are an ODM (original design manufacturer) design house. We provide design services, electronics manufacturing services, or a combination of both. We self-certify and conduct certification processes in-house, such as COTS screening, burn-in tests, and shock and vibration tests for conducted emission (CE) certification. Our facility is located in Electronics City, covering about 2790 square metres (30,000 square feet). In the US, we are planning to have our own office to serve our customers there. This office would primarily handle operational activities, and we have plans to expand it in the near future to further support our growth and customer service capabilities.

How does Numato manage to serve 14,000 customers globally?

We have a strong online presence. Our online store and global distribution network serve customers from across the globe, allowing them to place orders easily. We have partnered with DigiKey to sell our products. On average, we receive about 25-30 orders per day from customers around the world.

In addition to DigiKey, we are in discussions with other major distributors like Mouser, Future Electronics, and Avnet. Our goal is to onboard these three major chains by the end of this year. Besides our online presence, we have both online and offline distribution channels in countries such as Germany and Japan. We also maintain a dedicated online channel, allowing customers

to explore and purchase from our extensive range of products. Currently, our website features around 250 distinct Numato-branded products. While we have a strong brand presence, our primary business focus remains on ODM services.

Could you give us a brief of your EMS business?

We have one line that started in 2016. We mostly target prototyping customers and mid-volume production. When referring to mid-volume, we are typically looking at production runs of a few thousand units. We also offer EMS as a service to other companies and are open to serving any kind of customer. Typically, the market standard lead time for such services is around 20 to 25 days, but our lead time is just 12 days as we maintain a comprehensive inventory of components for our products, allowing our clients to bring their products to market rapidly. We're planning to expand our manufacturing capabilities with the addition of a new line by the end of the year to enhance our production capacity.

Why did you decide to have your own line instead of outsourcing?

The primary reason we established our own production line at Numato Labs is to effectively manage the lead times for delivering our products. By overseeing our own line, we have complete control over the production schedule, allowing us to ship products seen on our website within 2 to 4 business days. We plan and identify which products are fast-moving, ensuring that we have a minimum of 500 quantities of each board assembled, tested, quality-checked, packed, and ready for shipment.

What was your reported turnover for last year?

Last year, our reported turnover was \$2.5 million. In the context

TRPI-48 Process Indicator

TRPI-48 WITH
IP-65 PROTECTION

PROGRAMMABLE PROCESS INDICATOR

- ✓ Protection Level IP65 (Front Side) Optional
- ✓ Input : 4-20mA, 0-20mA & 0-10V DC
- ✓ 4 Digit 9999 Counts LED Display
- ✓ Programmable Display - 1999 to 9999
- ✓ Decimal Point Selectable
- ✓ Overload Indication
- ✓ 85-265V AC/DC or 19-90V AC/DC Aux. Supply
- ✓ Accuracy $\pm 0.5\%$ of FSD
- ✓ Size (mm) : 48 x 96
