Self-adapting USB 2.0 signal conditioner IC

Diodes Incorporated has launched the PI5USB212, a USB 2.0 signal conditioner that functions with supply voltages as low as 2.3V. This device is designed

for use in notebooks, PCs, and TVs, improving USB 2.0 detection and signal integrity

for up to five metres. It offers symmetric amplification and pre-emphasis to minimise intersymbol interference, supporting longer cable lengths. The PI5USB212 features low power usage, robust ESD protection, RoHS compliance, supports USB OTG 2.0, battery charging standards, and performs reliably in various environments. It can be configured via I2C or pin strapping for adjustable boosting and sensitivity, making it adaptable for various applications including portable devices.

Wide-range DC power converters for EVs

RECOM has introduced two new DC/DC converters tailored for electric vehicles (EVs): the RMOD300-UW and RMOD360-UW. These converters support a wide input range from 18V DC to 106V DC, covering common

battery voltages between 24V_{nom} and 90V_{nom}, and can endure surges up to 126V DC. They deliver 300W of power with options for 12.2V DC, 13.7V

DC, or 24.5V DC outputs. It provides 360W at 24.5V DC.

These converters function in temperatures from -40°C to +75°C, making them suitable for harsh conditions. They are also shock and vibration resistant, have about 90% efficiency, and an MTBF of 740,000 hours, making them reliable for electric vehicle and industrial transport applications.

High-side switch for automotive power management

HMI has launched the HL8518, an 80mΩ high-side switch designed for automotive applications, including low-wattage lamps and high-side re-

lays. This single-chip solution enhances system safety and offers comprehensive

diagnostics and full protection features. Certified Class-A under AEC-Q100-012, it has proven durability with a capacity to withstand 1 million short circuits to ground, ensuring reliability and uninterrupted operation in demanding settings.

Sensor for energy management in smart buildings

Connected Inventions, in collaboration with Epishine, has launched the Air-

wits EcoSense sensor, a device poised to transform energy management in smart buildings. This innovative sensor, powered by indoor light through Epishine's solar cells, offers a 30% reduction in energy usage. Both companies emphasise the sensor's role in advancing sustainable, energy efficient IoT solutions for the facility management sector.

Exceptionally bright blue and green SMD LEDs

Vishay Intertechnology, Inc. has introduced new blue and true green

surface-mount LEDs—VLMB2332T1U2-08 and VLMTG2332ABCA-08—using advanced InGaN technology for excep-

tional brightness. They are versatile for various applications such as medical light therapy, fitness trackers, smoke detectors, and consumer electronics. Their design features a $\pm 60^\circ$ half-intensity angle and a 120° viewing angle, operating at 2.9V. These LEDs offer robust and reliable illumination for demanding environments across multiple industries.

Compact capacitors for 450V use

TDK Corporation has introduced the EPCOS B43659 capacitor series, designed for 450V DC applications. Available in both two-terminal and three-terminal versions, they provide improved installation accuracy. With
