

maximum ripple current capacity of 7.01A at 120Hz and +60°C, and du-

rability of 2000 hours at temperatures up to +105°C, these capacitors are ideal for power supplies,

frequency converters, UPS systems, medical equipment, and solar inverters. They are crafted with enhanced anode foils for increased surface area and durability and include safety features like a pressure relief device.

Lowest on-resistance, top and bottom cooling GaN FET

EPC has introduced the EPC2361, a gallium nitride (GaN) field-effect transistor (FET) boasting an industry-leading low on-resistance of 1mΩ at

100V. The device is encased in a compact package, designed for

top and bottom cooling to improve thermal management. It is ideal for power applications in industries like data centres, eMobility, and solar power conversion, but lacks avalanche protection for over-voltage spikes.

Low-cost, reliable automotive-grade resistors

Automotive-grade resistors like Stackpole's RPCA series provide enhanced reliability and performance at a fraction of the cost and with greater availability than military-spec components.

These resistors are particularly effective

in applications needing specific pulse withstand capabilities, often not found in other components. The AEC-Q200 qualified RPCA series utilises proprietary materials and manufacturing processes, including dedicated production lines and 100% automated

optical inspection. This ensures lower failure rates by over tenfold, superior test results, and excellent anti-sulphur properties, passing the ANSI/EIA977 sulphur test with minimal resistance shift. The RPCA series, suitable for automotive electronics, medical devices, and more, offers features like broad resistance ranges and higher anti-surge performance than the RMCF series.

EMBEDDED

AI-powered video processor for computational imaging

Teledyne FLIR has launched the AVP, an advanced video processor, powered by the cutting-edge Qualcomm

QCS8550 chip. The AVP excels in AI performance, optimised for lightweight and energy-efficient operations, suitable for

integration with thermal and visible cameras across various platforms like drones, robots, and security systems. Featuring the company's proprietary Prism AI and ISP software libraries, the processor supports multiple applications including automotive systems, surveillance, and reconnaissance missions.

Enhancements in edge server ecosystem

Congatec has unveiled improvements to its edge server platform, introducing a µATX server carrier board and

COM-HPC server-on-modules with Intel Xeon D processors (Ice Lake). The

µATX board, tailored for real-time servers and critical infrastructure at the edge, is compatible with Congatec's new COM-HPC modules using Intel Xeon D-1800 and D-2800 series.

This platform offers a robust, scalable solution for challenging applications and supports virtual machines, edge servers for energy grids, and smart city infrastructures. It focuses on customisation, rapid development, and future-proof designs, with features like an integrated hypervisor for virtual machine management, real-time 5G capabilities, and various expansion options for industrial applications.

MANUFACTURING EQUIPMENT

Automated dispensing robots for precision manufacturing

Nordson EFD has introduced the GVPlus and PROX series of automated dispensing robots. These robots are designed to optimise precision,

efficiency, and reliability in high-demand industries such as electron-

ics, automotive, and medical device manufacturing. They have impressive repeatability of up to 8µm and tool payloads of up to 4.5kg, along with a workspace measuring 400mm x 400mm for the GVPlus series. The PROX series features linear motors for enhanced speed and durability, ±0.003mm repeatability across all axes, and a 500mm x 500mm workspace. Both series are equipped with CCD smart vision cameras and advanced software for accurate fluid dispensing adjustments.

TEST & MEASUREMENT

Oscilloscopes with advanced signal analysis capabilities

SIGLENT's new SDS1000X HD series of digital storage oscilloscopes feature 2GSa/s sampling rates, 12-bit ADCs, and options for 200MHz and
