

**CHAKRAVARTHI C**  
MD, QUANTUM ENERGY

## “OUR FOCUS Is Primarily ON BHARAT Rather Than INDIA”

While numerous electric two-wheeler brands are thriving in Tier 1 and Tier 2 regions of India, Quantum Energy, supported by Kusalava International, contends that the real growth lies in Tier 3, 4, and beyond regions in Bharat. How does this emerging player in the electric two-wheeler market pose a challenge to the established giants? Let's hear from Chakravarthi C, MD of Quantum Energy

**Kusalava has partnered with several automotive OEMs, many of which are planning to introduce electric vehicles. Is there a conflict of interest here?**

In our component manufacturing business for automotive OEMs, we have always focused on commercial and off-road vehicles. The decision to enter the OEM business was solely based on Quantum's aim to design, develop, manufacture, and retail electric two-wheelers (E2W).

We have never collaborated with a two-wheeler company, and we made a deliberate choice not to engage in a business model that

involves retailing components for the two-wheeler industry.

**The electric two-wheeler market has attracted interest from players outside the automotive sector. Do you see a future for Quantum in this market?**

Globally, brands like Tesla and BYD have demonstrated the challenge legacy OEMs face in maintaining their market share in EVs compared to the internal combustion engine (ICE) segment. India also has examples like Ola Electric and Ather Energy.

There may be numerous players

with small market shares. Many legacy players adhere to a certain way of operating, which they maintain even in the case of EVs. However, EV architecture is straightforward, allowing companies to develop high-quality products with proper testing and validation.

**Could you elaborate on the statement “legacy players adhere to a certain way of operating”?**

Sure, since Quantum is not involved in the ICE two-wheeler segment, we can focus on meeting the specific EV market needs. We do not have to worry about potential
