

“We At Delta FOCUS ON CHARGERS With Multiple Dispensing Guns”

As hybrid vehicle sales gain momentum in both the United States and India, the electric vehicle market finds itself under a veil of uncertainty once more. How does Delta, one of the earliest players in the EV charging segment, view the current developments. Manjula Girish, Senior Director, Delta Electronics India shares her view with EFY's Mukul Yudhveer Singh!

Sales of electric vehicles (EVs) are declining in many regions of the world. What are your views on this trend?

If you look at the United States and India, industry data suggests that EV sales trends in both countries are similar. For example, range anxiety was a significant concern in the US in the past, and it's the same in India now. The issue of EV chargers not being maintained in functional status was also a problem faced by both US and Indian EV markets. Any new technology takes time to be adopted by markets and consumers. Many OEMs have committed to zero emissions starting from the 2030 mark, pushing the market forward.
