

At-a-glance view of key industry trends that can shape the future of your business...

OLED Shipments to Surge by 123% YoY in 2024

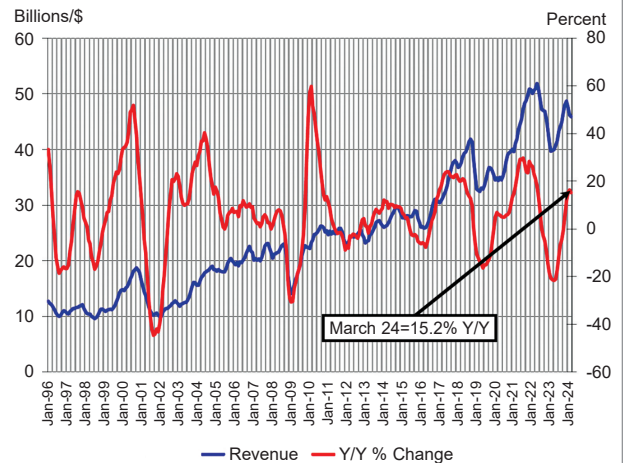

OLED monitor display shipments rose by 415% YoY in 2023 and are expected to surge by 123% YoY in 2024, to reach 1.84 million units. Increasing consumer demand for better monitor specifications and larger sizes could lead to an uptick in LCD monitor panel prices, reducing the price difference between LCD and OLED monitors. Top tier monitor brands are incorporating more OLED displays into their product lineups for 2024, which helps reduce costs for both OEM and panel companies.

Global Chip Sales Soar by 15.2% in 1Q24

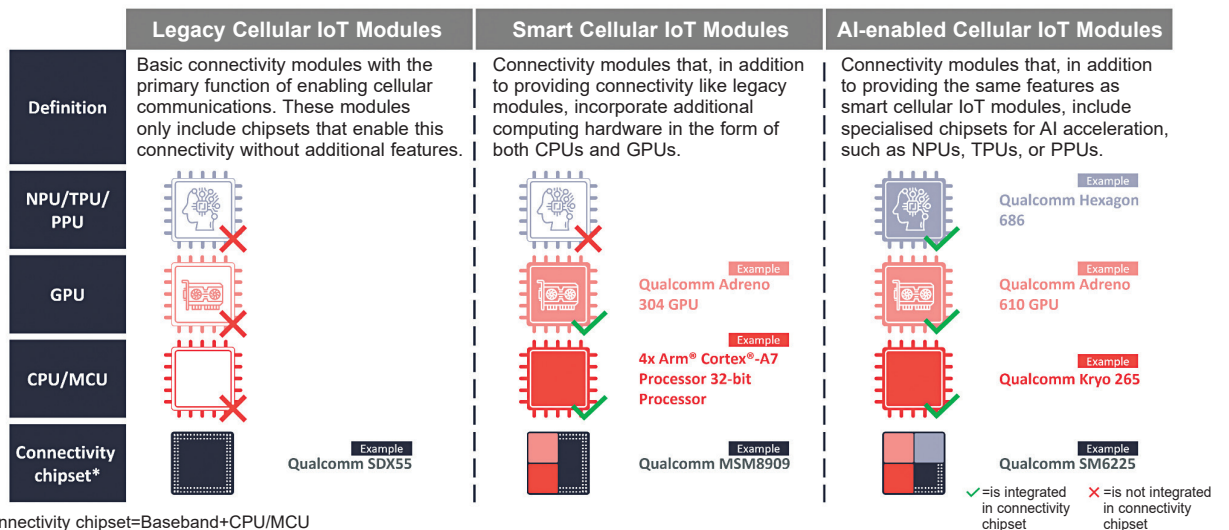

Global semiconductor sales saw a YoY increase of 15.2% in the first quarter of 2024, reaching \$137.7 billion, and experienced a slight month-to-month decline of 0.6% in March 2024. YoY sales in March 2024 increased in China (27.4%), the Americas (26.3%), and Asia Pacific/All Other (11.1%), but decreased in Europe (-6.8%) and Japan (-9.3%).

Cellular IoT Modules, Chipsets Fall 16% YoY in 2023, Surge Predicted for 2024

Shipments of cellular IoT modules and chipsets dropped by 16% YoY in 2023 but are projected to climb back to nearly 2022 levels by 2024. Smart and AI-enabled cellular IoT module shipments will grow rapidly, at a CAGR of 76% until 2027. Computing power and intelligence are crucial, with dedicated chipsets driving AI-enabled IoT. Qualcomm, Sony Altair, and UNISOC are key chipset providers, with potential for others like MediaTek and STMicroelectronics to enter the market.
