

17 of 27 PLI for IT hardware approved companies to begin production in 2024

The IT hardware PLI scheme is set to kickstart production with 17 out of 27 selected companies expected to commence production before end of this year, signalling a significant step towards boosting domestic manufacturing in the sector. According to Secretary S. Krishnan of the Ministry of Electronics and Information Technology, out of the 17, six-seven had already initiated production last year. Notable companies granted approval include Flextronics, VVDN, Optimus, Padget Electronics, SOJO Manufacturing Services, Goodworth, Neolync, Syrna SGS, Mega Networks, Panache Digilife, and ITI Ltd.

India plans to increase local value addition to 40%

India plans to significantly increase local value addition in electronics manufacturing, aiming to raise it from 18-20% to 38-40% in the future. The government is considering a larger scheme to promote electronics

component manufacturing, focusing on identifying top five components for incentives to boost local production, according to S. Krishnan, Secretary, Ministry of Electronics and Information Technology.

IIT Madras startup set to launch first Designed-in-India chip

Mindgrove Technologies, a chip design startup incubated at IIT Madras, with support from Peak XV Partners, has introduced India's first commercial 700MHz high-performance microprocessor, Secure IoT, for connected devices, especially those requiring enhanced security at

the chip level. It integrates features such as low power consumption, high performance, and versatility. Out of the company's first hundred prototypes, ten are already undergoing functional testing, and the remainder are set to arrive in the coming weeks.
