## Universal flash storage controllers

Phison Electronics unveils its lineup of universal flash storage (UFS) controllers, including the PS8325, PS8327,

PS8329, and PS8361, catering to the escalating demands for mobile storage perfor-

mance. UFS 2.2's full-duplex mode offers read speeds compared to eMMC's half-duplex mode, supporting smart-phone functions that process data, such as recording and video playback, while reducing power consumption at the same performance level as eMMC. This contributes to battery life in smartphones and tablets, addressing the demand for performance and power consumption in mobile devices.

## IoT module for wireless connectivity

STMicroelectronics has launched the STM32WL5MOC IoT system-in-package (SiP) featuring a dual-core

STM32WL55JC wireless SoC. The compact module, designed for

remote metering, monitoring, and smart-sensing, offers LPWAN wireless connectivity in a 10mm x 10mm

LGA92 package. It integrates the SoC with essential components like frequency-controlled oscillators, a balun IC, filter, matching network, and a receive/transmit switch, streamlining RF design and saving space. The SiP supports low-power data communication, ensuring over ten years of battery life, and operates in the 864MHz to 928MHz band for global use.

## Long-range IR sensors

Phlux Technology has introduced the Aura family of 1550nm devices featuring noiseless InGaAs APD technology,

promising heightened sensitivity over traditional counterparts. These sensors extend lidar, laser rangefinders, and optical fibre

test equipment ranges by up to 50%, seamlessly replacing existing components. Operating at temperatures up to +85°C without compromising performance, these APDs utilise an antimony alloy in manufacturing, enabling gains up to 120. With rapid overload recovery and impressive specifications spanning responsivity, spectral range, excess noise factor, and operational parameters, The devices are claimed to be a game-changer for various applications.

## Human-machine interface microprocessors

Nuvoton has introduced the NuMicro MA35H0 series, tailored for industrial

and commercial human-machine interface (HMI) applications, including automation, smart buildings, appliances, healthcare, and energy sectors. Designed to operate in extreme temperatures from -40°C to 125°C,

it supports advanced security through Arm TrustZone, secure boot, and cryptographic acceleration, ensur-

ing data protection. With hardware floating-point units for DSP, it also boasts enhanced media and UI performance via the Arm NEON SIMD engine. The MA35H0 series enhances user interfaces with its integrated LCD controller for high-resolution displays and video decoding, offering robust connectivity options like Ethernet, USB 2.0, and support for resistive touchscreens.

## AI graphics chips

Nvidia Corp. has launched three advanced desktop graphics chips for gamers and designers. These chips enable AI applications directly on devices, eliminating the need for internet-based services. The highlight, the GeForce RTX 4080 SUPER, boasts more processing cores and faster memory, running Stable Diffusion XL software 1.7 times faster than its predecessor, enhancing ray-traced gaming at 4K resolution. Nvidia's innovations promise significant performance boosts, particularly against Intel-powered machines, by supporting lifelike gaming experi-
