India's Smartwatch Market Grows 50%, Affordable Pricing Boosts Shipments

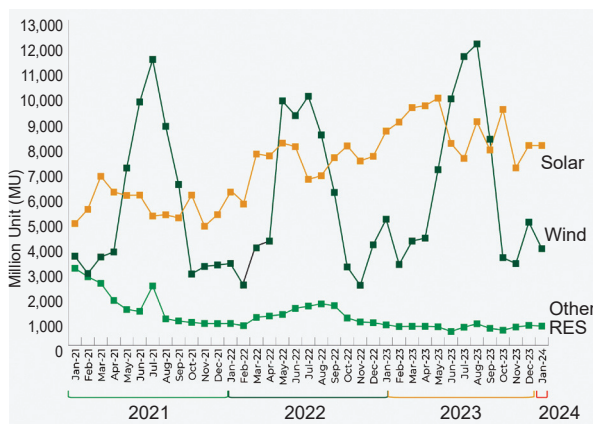

India's smartwatch shipments experienced 50% YoY growth in 2023. Over 125 active smartwatch brands were observed, indicating a move towards market consolidation. The top five brands collectively achieved 81% market share. The market shifted towards affordable devices, with 54% shipments in 2023 priced under ₹2000, up from 26% in 2022. Fastrack achieved the highest shipment growth among major OEMs.

India Saw 7.9% Less RE Generation in January 2024

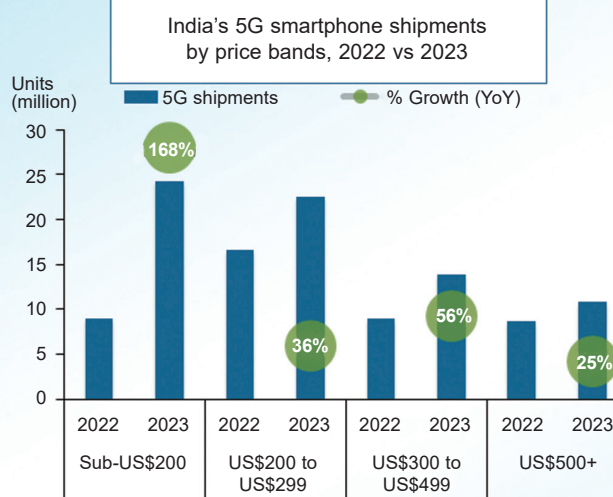

January 2024 saw 12,623MU renewable energy generated in India, 7.9% less than December 2023. Wind energy generation decreased by 21% on a month-on-month basis. The RE sector raised \$384 million in January. Two major investments include SBI's \$250 million investment in green projects and Tata Capital's \$75.2 million rupee term loan to Cleantech Solar for open-access solar and wind parks across India.

India Shifts Towards Expensive Smartphones, Market Stabilised with 2% YoY Decline in 2023

India's smartphone shipment experienced a 2% YoY decline, totaling 148.6 million units, in 2023. With a shift towards expensive smartphones, the overall market stabilised due to effective vendor inventory management, affordable 5G models, and improved consumer environment in the latter part of the year. The government's recent reduction in electronic components' import duties is expected to have minimal impact on overall materials' costs in this segment.

India's 5G smartphone shipments reached 71.5 million units in 2023
