DR PARIMAL JOSHI

Did you ask the plant operators to tune the process to 98.3°F? They tuned to an FM channel and, eventually, the plant got tripped!

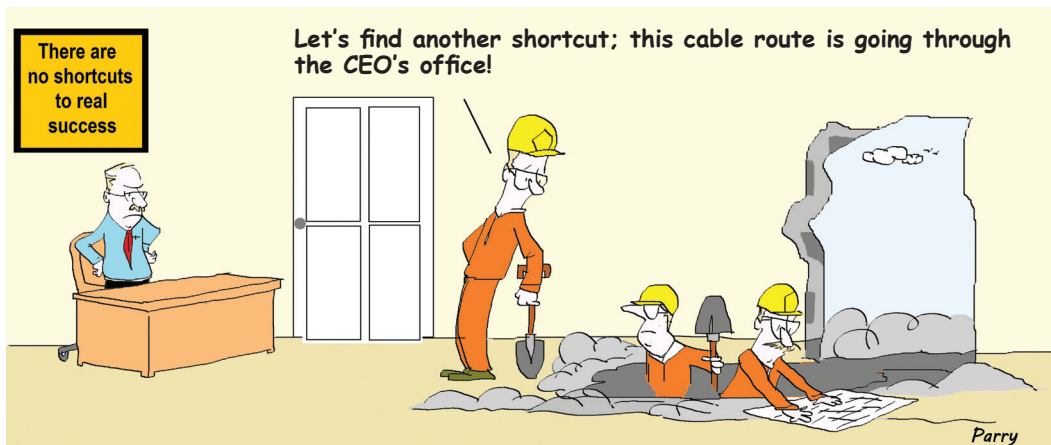

Do you feel like you are an orifice plate? You must be taking your office work with you to your home. It has created a second pressure point on you!

We conducted a root cause study for many customer requests for after-sales support on our smart control valves! It shows, we provided German manuals to all our Japanese customers!

differential pressure, or DP or Δp , which is simply the difference between two applied pressures.

Dr Parimal Joshi is an electronics engineer. He works for United Electric, a 92-year-old corporation situated in Watertown, Massachusetts, and he presently resides in the US. He enjoys discussing complex engineering topics with cartoons to make them easier to understand.
