

THE DASHBOARD

India's Drone Market Surges with High Optimism in 2023

In 2023, India's drone market exhibited an optimism level of 7.8, surpassing the previous year's optimism of 7.0 and significantly exceeding the global average of 6.6. Majority of drone companies in India engage in drone services and education, with approximately 21% specialising as drone service providers (DSPs) and another 21% offering drone training and education services. Software manufacturers constitute 18% of the market, aligning with India's reputation as a strong market for software development, while hardware manufacturers occupy the fourth position with 12% representation. India demonstrates a notable concentration of medium-sized drone companies, with 33% falling within the 51-200 employees range, compared to 27% in both the 1-10 employees and 11-50 employees ranges.

India, China Cellular IoT Module Shipments Grow in 2023 Amid Global Decline

In 2023, global cellular IoT module shipments experienced their first-ever annual decline, decreasing by 2% year-on-year (YoY). India and China showed positive growth driven by increasing demand in the smart meter, POS, and asset tracking markets. The rest of the world experienced a sharper decline due to inventory adjustments following supply chain disruptions and reduced demand in key market verticals like industrial and enterprise.

5G RedCap to Transform IoT Module Shipments

The cellular IoT ecosystem is expected to undergo significant transformation over the next seven years with the advent of 5G technologies playing a crucial role. Mass adoption of 5G RedCap is predicted to start in 2024, particularly in China, serving as a mid-tier connectivity solution for 5G devices that do not require the high specifications of ultra reliable low latency communications (uRLLC) and enhanced mobile broadband (eMBB).
