

ics. The company has also extended its university research programme to 6G and will set up a 6G lab. The first group of 17 academicians will receive a fund of \$1.02 million over three years.

Dixon to acquire majority stake in Ismartu India

Contract manufacturer Dixon Technologies is acquiring a majority stake in Ismartu India, a leading electronics and mobile device manufacturer, as part of its strategic expansion plans. Dixon will initially acquire 50.10% shares for an initial consideration of ₹2.38 billion. Ismartu India operates three manufacturing facilities in Noida and is a market leader in feature phones. It reported a turnover of ₹62.35 billion for FY23. The deal is expected to close within 90 days and requires approval from the Competition Commission of India (CCI).

Kaynes bags contract to manufacture 3000 RUDRA HPC servers for CDAC

Kaynes Technology, based in Mysuru, India, has been contracted by the Centre for Development of Advanced Computing (CDAC) to manufacture 3000 RUDRA high-performance computing (HPC) servers. These servers, developed under the National Supercomputing Mission (NSM), aim to fulfil computational needs across various sectors like hyper-scale data centres, edge computing, banking, finance, healthcare, and advanced manufacturing. Traditionally, servers have been imported into India, but Kaynes Technology's initiative aims to promote indigenous manufacturing.

Indian Oil and Panasonic Energy partner to manufacture Li-ion cells in India

Indian Oil Corporation has partnered with Panasonic Energy Co. to establish a joint venture for manufacturing cylindrical lithium-ion cells in India, aiming to meet the growing demand for batteries in electric two- and three-wheelers and energy storage systems. This is accompanied by a feasibility study on battery technology to support India's clean energy transition.

India's TDB to set up commercial Li-ion battery recycling plant in Uttarakhand

The Technology Development Board (TDB) has signed an agreement with Remine India Private Limited to establish a commercial plant for recycling Li-ion batteries and e-waste using indigenous technology. The project will receive financial assistance of ₹75 million from TDB, with a total project cost of ₹150 million. The recycling facility aims to address the current low recycling rate of Li-ion batteries, which stands at only 5%, with the rest ending up in landfills.

MosChip collaborates with Tenstorrent for advanced RISC-V cores

India's MosChip Technologies has announced partnership with computing company Tenstorrent to work on the design of Tenstorrent's advanced RISC-V solutions. Tenstorrent will leverage MosChip's tape out expertise in design services to boost its RISC-V core development and deliver better AI hardware and solutions. The collaboration will focus on physical design, DFT (design for testing), verification, and RTL (register transistor level) design services.

Sterling and Tecnicas Reunidas to set up hydrogen electrolyzers in India

India's Sterling Generators Private Ltd has entered into a partnership with Spain's Tecnicas Reunidas, S.A., a global leader in engineering and construction in the energy sector, to develop a 1MWe hydrogen elec-

trolyser. The collaboration aims to leverage green hydrogen for India's energy independence, resilience, and innovation, aligning with the country's renewable energy targets. There are plans to scale up to 10MWe.

RECPDCL and BHEL to develop utility-scale renewable energy

Rural Electrification Corporation Power Development and Consultancy Limited (RECPDCL) has collaborated with Bharat Heavy Electrical Limited (BHEL) to jointly develop utility-scale renewable energy projects across India, with 1GW initial capacity. They will form a dedicated special purpose vehicle (SPV) that will leverage BHEL's engineering expertise and REC Limited's investment capabilities in infrastructure, initially focusing on the commercial and industrial (C&I) segment.

Delta Electronics signs MoU with Tamil Nadu college for academic collaboration

Delta Electronics India Pvt Ltd has signed an MoU with SASTRA Deemed University to bolster capacity in electronics, automation, and digital manufacturing. Selected M.Tech students from various disciplines, including artificial intelligence, data sciences, robotics and automation, and computer science will have an opportunity to study first year at SASTRA and the second year at Yuan Ze University in Taiwan, with an internship at Delta Electronics, Taiwan. The second year of study would be fully funded by Delta Electronics, and upon successful graduation, students will join Delta Electronics in India.
