

“AIC-T-Hub Aims TO GROW STARTUPS So More Indian Unicorns CAN CONTRIBUTE TO THE GDP”

T-Hub has collaborated with Atal Incubation Centre (AIC), initiated by the Atal Innovation Mission to incubate semiconductor startups, fostering innovation for India's advancement in entrepreneurship, contributing to GDP and employment opportunities. In a conversation with EFY's Yashasvini Razdan, AIC-T-Hub's CEO, Rajesh Adla, reveals what sets apart AIC-T-Hub from other incubators

RAJESH ADLA
CEO, AIC-T-HUB

T-hub calls itself India's largest incubator, why so?

We have established ourselves across 39 sectors over the last eight years. Our incubation programmes are designed to cater to every stage of the startup lifecycle. We offer programmes to transition a startup across different stages: idea, market, or revenue stages, or the final level of scale. If a startup performs well at a scale level in India, we offer incubation activities to expand into international markets such as the United States, Canada, and others. We have sector-specific incubation programmes for more than 400 startups, focusing on areas like mobility, sustainability, semiconductors, spacetechnology, and healthcare.

Don't other incubation programmes offer the same facilities? What makes you different?

Our approach sets us apart from other incubators due to the scale at which we operate. While other incubators also have programmes for the idea and market stages, our established structure is distinctive. If you join us at the idea stage, you have the potential to graduate at the scale stage, achieving substantial revenues and establishing collaborations with other countries. Our incubation model is a comprehensive journey for startups, enabling them to grow holistically.
