Programmable logic devices

TI has expanded its logic portfolio with new programmable logic devices (PLDs) to streamline engineering workflows. These PLDs integrate up to 40 combinational, sequential, and analogue functions, reducing board size by 94% and cutting

system costs compared to traditional discrete logic designs. With a compact form factor—92% smaller than competitors—and quiescent current under 1µA, they consume 50% less active power, making them suitable for battery-powered devices like EVs and gaming controllers. Available in automotive-grade packages, the PLDs support SPI, I²C, and watchdog timers.

1 Form A solid-state relay

Vishay Intertechnology Inc. has introduced the VORA1010M4, the industry's first 1 Form A solid-state relay with AEC-Q102 qualification and 100V load voltage capacity. Housed in a compact SOP-4 package, it offers ultra-fast turn-on and turn-off times of 0.1ms and operates at temperatures up to +125°C. Designed for automotive, industrial, telecom, and energy sectors, it supports applications like lighting control, motor drives, battery management, inverters, and telecom power distribution.

Ultra-high amperage SMD fuse

Littelfuse Inc. has launched the 871 Series ultra-high amperage SMD fuse, offering 150A and 200A ratings—an

upgrade from the previous 881 Series, which maxed out at 125A. This series simplifies designs by eliminating the need for parallel fusing, saving space and reducing complexity. It

has heat-resistant UL94 V-0 plastic body, low voltage drop for energy efficiency, and compatibility with lead-free solders. AEC-Q200-qualified and RoHS-compliant, it is suitable for data centres, servers, and automotive applications.

Voltage-controlled SAW oscillators

Microchip Technology has launched a series of voltage-controlled SAW oscillators (VCSOs) called the 101765

series. The VCSOs work at different frequencies, fitting into systems like

radar and instrumentation that use phase-locked loops and AESA technology. These oscillators meet strict aerospace and defence standards, including MIL-PRF-38534 screening, ensuring reliability for critical applications.

All-band GNSS antennae

U-blox has launched the ANN-MB2, an external GNSS antennae for precise

positioning. It works with U-blox's high-precision GNSS technology and is useful for industrial automation,

surveying, autonomous vehicles, mobile robots, and other industries that need centimetre-level accuracy, even

in tough conditions. The antennae covers multiple satellite constellations and supports all major GNSS systems, ensuring accurate positioning.

FET-type controller ICs

ROHM has launched a series of external FET-type controller ICs with PWM current control, targeting AC-DC

power supplies for industrial applications. These ICs address semiconductor shortages in industrial

power supplies by offering different UVLO levels optimised for various semiconductors, preventing thermal issues. The MOSFETs are suitable for engineers and manufacturers in industrial sectors, especially those working on AC-DC power supplies.

Multi-modal edge AI platform

SiMa.ai has launched the MLSoC Modalix, the industry's first multi-modal edge AI product family. This

platform supports advanced AI models, including CNNs, transformers, LLMs, LMMs, and generative

AI. The platform features integrated ISP, eight PCIe Gen 5 lanes, and eight dual-threaded ARM Cortex-A65 CPUs,
