

THE DASHBOARD

Indian Tech Startups Secure Slightly Higher Funding This Year

India Brand Equity Foundation's report on the ESDM ecosystem quoted figures from NASSCOM that stated that Indian tech startups secured US\$4.1 billion in the first half of 2024, marking a 4% rise from the US\$3.96 billion raised in the second half of 2023. In 2023, the funding scenario for tech startups turned bleak amid the global uncertainty, witnessing a 67% YoY plunge in total funding to US\$6.0 billion. This decline came after the peak funding levels observed in 2021 (US\$24.1 billion) and 2022 (US\$18.2 billion), where investors displayed confidence in Indian tech startups. In 2023, the number of deals declined to 824. However, the decline appears to be cyclical than a long-term trend.

India's Semiconductor Consumption is to Hit \$110 billion by 2030

India's semiconductor consumption is projected to steadily rise from \$22 billion in 2019 to \$64 billion by 2026, growing at a CAGR of 16% and reaching \$110 billion by 2030. Local sourcing of chip components, which will rise to 17% in 2026, will drive the growth. By then, key market segments will include wireless communications (\$26.5 billion), consumer goods (\$26 billion), and automotive (\$22 billion). In terms of application and component, the handset and processing market will remain the largest consumer of semiconductors in India.
