

PSMC abandons Japan chip project for Indian partnership

Taiwan's Powerchip Semiconductor Manufacturing Corporation (PSMC) has cancelled plans for a chip plant in Japan, shifting its focus to a technology partnership in India to ease financial pressures. The collaboration with Tata Group aims to establish a facility in Dholera, Gujarat, producing legacy chips. This move supports India's semiconductor ambitions while PSMC seeks overseas growth.

India chosen for French overseas defence electronics facility

Safran Group plans to establish its first defence electronics unit outside France in India, focusing on military sensors and electronics. This announcement followed strategic discussions between Indian National Security Advisor Ajit Doval and French officials. The collaboration aims to enhance India's defence capabilities and manufacturing and expand ties in aerospace and military technology, including unmanned systems and satellite launches.

Adani Green and Google partner on solar-wind project

Adani Green Energy Limited (AGEL) has partnered with Google to supply renewable energy from a new solar-wind project in Khavda, Gujarat. Expected to be operational by Q3 2025, this initiative aligns with AGEL's goal of achieving 45GW renewable capacity by 2030. The collaboration supports Google's aim for 24/7 carbon-free energy and emission reduction.

BEL and ISRO research hub partner to enhance satellite communication technology

Bharat Electronics Limited (BEL) and ISRO's Space Applications Centre (SAC) have signed a deal to manufacture travelling wave tube amplifiers (TWTAs) in India. This collaboration aims to enhance indigenisation in defence and space, reducing foreign exchange costs. The TWTAs will be vital for satellite communication, navigation, and

various scientific missions, supporting India's technological growth.

West Bengal prepares site for landmark India-US semiconductor fab

West Bengal Chief Minister Mamata Banerjee announced the identification of a site for India's first national security semiconductor fabrication plant in partnership with the US. During a meeting with US Consul General Kathy Giles-Diaz, they discussed creating a roadmap by January. The initiative, supported by the India Semiconductor Mission, aims to boost local employment and infrastructure.

GlobalLogic opens STEM lab in Bengaluru school

GlobalLogic has launched a STEM lab in Bengaluru to equip 1000 school students with practical skills in robotics, coding, and AI, aligning with India's NEP 2020. Part of its '#EducateToEmpower' plan, the initiative includes teacher training and aims to support underprivileged communities, foster critical thinking, and prepare students for future careers in a digital landscape.

Foxconn-backed Sharp plans display fabrication facility

Sharp, backed by Foxconn, is seeking an Indian partner to establish a display fabrication facility under the India Semiconductor Mission. Currently in advanced discussions with multiple firms, Sharp aims to invest up to \$5 billion in large displays, enhancing its market position. This move follows a shift from large-area LCD production to specialised displays.

Tata and Analog Devices to explore semiconductor opportunities in India

Tata Group has partnered with Analog Devices (ADI) to explore semiconductor manufacturing in India. The collaboration, involving Tata Electronics, Tata Motors, and Tejas Networks, aims to integrate ADI products into electric vehicles and network infrastructure. This follows Tata's recent investments in a semiconductor assembly facility in Assam and a wafer fab in Gujarat, enhancing India's electronics sector.

Delta Electronics partners with Savex to expand market reach

Delta Electronics India has teamed up with Savex Technologies to enhance its market presence through Savex's distribution network. The collaboration targets system integrators, MSMEs, and government projects in tier-3 and tier-4 cities, aiming to provide reliable power management solutions. This partnership will expand Delta's reach into underserved regions across India.

Samsung India cuts jobs as market slows down

Samsung Electronics is laying off over 200 executives in India, affecting about 9-10% of its managerial staff due to slowing growth and low consumer demand. This decision coincides with a strike at its Chennai factory, disrupting production. Affected employees will receive severance packages while the company plans further restructuring to streamline operations.
