

PIC64GX MPU

64-bit RISC-V® Quad-Processor With Asymmetric Multi-Processing (AMP)

Introducing Microchip's PIC64GX microprocessor (MPU), designed to meet the demands of modern intelligent edge applications across industries like industrial, automotive, communications, IoT, aerospace and defense. The PIC64GX family offers unparalleled compute power and scalable performance, enabling engineers to innovate with confidence.

Supported by our robust MPLAB® development ecosystem and an extensive suite of libraries, you'll accelerate your design, debug and verification processes, significantly reducing time to market. Discover the power of the PIC64GX series for creating high-performance, real-time AMP systems that execute flawlessly every time.

Key Features

- 64-bit RISC-V quad-core processor with Asymmetric Multi-Processing (AMP) and deterministic latencies
- Advanced security features including integrated Nonvolatile Memory (NVM) to implement secure boot and manage security keys
- A wide variety of connectivity interfaces including Ethernet Time Sensitive Networking (TSN), USB, PCIe®, SPI and I2C
- MIPI CSI-2®, HDMI® 2.0 and a video pipeline for imaging applications
- Support for Linux®, RTOS and commercial operating systems
