CMOS image sensor

OMNIVISION has launched the OV50M40 image sensor, designed for smartphone cameras, offering a 50MP CMOS sensor with 0.61-micron

pixels. It supports front, main, ultra-wide, and telephoto setups. Its 4-cell binning enhances

low-light performance with up to 64x analogue gain. The sensor supports up to 50MP stills at 12fps and 12.5MP images at 60fps, using OMNIVISION's PureCelPlus-S technology for compact design. It also supports CPHY/DPHY MIPI interfaces and dual DOVDD voltage levels.

Chip resistors

Stackpole has expanded its RMCA series of automotive-grade resistors by introducing a smaller 0201 chip

size, enhancing their versatility in compact electronic devices. These resistors offer improved electrical stability

and environmental reliability, meeting stringent automotive industry standards (AEC Q200 qualified) without the typical high costs of established reliability components. Ideal for consumer electronics and industrial handheld devices, where space and

reliability are crucial, the RMCA series is produced on dedicated lines with strict quality controls. This results in superior performance and a significantly lower failure rate, up to ten times better than standard resistors.

Isolated DC/DC converter

Traco Power's TEC 3UI series of isolated DC/DC converters supports a wide input voltage range from 9V to 75V DC, replacing traditional 2:1

and 4:1 converters while accommodating various standard bus voltages. The converters operate in

temperatures from -40°C to +80°C and altitudes up to 5000 meters, offering 1600V DC I/O isolation. Housed in a compact SIP-8 plastic case, the TEC 3UI series is available in single- and dual-output models, certified to IEC/EN/ES 62368-1 standards, making it ideal for space-limited industrial applications.

PIN photodiode

Vishay Intertechnology's VEMD8082 silicon PIN photodiode is designed for biomedical applications like

heart rate and blood oxygen monitoring. Its compact size makes it ideal

for low-profile devices, such as smartwatches. The VEMD8082 offers enhanced sensitivity in visible and

near-infrared wavelengths, crucial for detecting blood volume and flow changes. These advancements make it highly effective for health monitoring and high-speed photodetection in wearable devices.

EMBEDDED

2GB Raspberry Pi 5

Raspberry Pi has introduced a new 2GB model to the Raspberry Pi 5 family, now available from element14.

Since its launch, the Raspberry Pi 5 has fulfilled its vision of offering an affordable, general-purpose

desktop computer. It is 150 times more powerful than the original 2012 model, thanks to technological advancements and mass production. The 4GB and 8GB versions use the BCM2712C1 processor and RP1 I/O controller, but the new D0 stepping removes unused features, reducing production costs.

SOM for Edge IIoT

MYIR has launched the MYC-LMA35 system-on-module (SOM) featuring Nuvoton's NuMicro MA35D1 proces-

sor, with dual 64-bit ARM Cortex-A35 cores (800MHz) and a Cortex-M4 core (180MHz), ideal for

Edge IIoT gateway applications. The SOM includes 256MB DDR3L memory, options for 256MB NAND Flash or
