

propose extending similar subsidies to retrofitting services, significantly lowering costs and enhancing market competitiveness.

Despite these challenges, Starya Mobility is actively working to validate its market fit and prepare for future growth by confirming strong demand for its retrofitted scooters. They have already converted 300 +

scooters in Bengaluru and plan to scale up once demand is firmly established. Their approach includes maintaining high quality standards and utilising both locally produced and imported materials to ensure the efficiency of their retrofit kits.

Starya Mobility represents a significant player in India's evolving EV landscape, focusing on

retrofitting as a sustainable solution that preserves existing vehicles while upgrading their functionality. Strategic partnerships complement their efforts, and a focus on both consumer and business markets positions them well for future growth despite current regulatory and market challenges.

3 THINKRAW INDIA'S SOLAR SOLUTIONS FOR THE AGRICULTURAL SECTOR

ThinkRaw's blend of technology and tradition is revolutionising agriculture with solar-powered solutions that enhance efficiency and sustainability in farming and aquaculture.

Dhivara Mitra

Krishi Dhanu

Established in 2016 by Minushri Madhumita and Amrita Jagatdeo, ThinkRaw India Private Limited is a solar EPC (equipment procurement and commissioning) contractor based in Delhi. They have introduced two innovative products—Dhivara Mitra and Krishi Dhanu—to simplify the aquaculture and agriculture sectors.

Minushri describes ThinkRaw as embodying the concept of 'thinking outside the box'. Their products

integrate IT and solar technologies. Dhivara Mitra addresses aquaculture challenges by using IoT and solar power to manage feed distribution, dissolved oxygen levels, and pH levels in water bodies. Additionally, they have developed Krishi Dhanu, a solar-powered portable device designed to dispense solid fertiliser in the agriculture sector.

Dhivara Mitra, a floating vessel equipped with 1.1 kilowatts of solar-powered off-grid power,

offers comprehensive aquaculture functionality. It regulates feed distribution, pH levels, and aeration, ensuring optimal fish and prawn harvesting. Embedded with IoT sensors, it provides real-time monitoring of the dissolved oxygen and pH levels of the water body and alerts farmers in case of any imbalance.

For agriculture, they have introduced Krishi Dhanu, a solar-powered portable device that simplifies
