IT hardware sector seeks MeitY's import policy clarity before IMS expiration

The IT hardware sector has urged the Ministry of Electronics and Information Technology (MeitY) to provide clear guidelines on upcoming import policies for products under the HS 8471 category and increase stakeholder engagement. Earlier, MeitY modified import norms following previous restrictions, allowing shipments under new regulations. With the import management system (IMS) set to expire on September 30, 2024, the sector seeks clarity and a transition period for any policy changes.

Bans lifted, India resumes Chinese investments in electronics

An Indian inter-ministerial committee has approved several investment proposals in electronics manufacturing, including those from Chinese firms like Luxshare and a joint venture involving Bhagwati Products and Huaqin Technology. India's electronics sector, though expanding, still heavily relies on China and Hong Kong, which supplied over \$18 billion in components during the financial year 2023-24.

UP government allocates land for both HCL and Kaynes' IC plants

The Uttar Pradesh cabinet has approved 50 acres each for HCL and Kaynes Technology to build small panel driver ICs and display driver integrated circuits (DDIC) units in Noida's YEIDA (Yamuna Expressway Industrial Development Authority) Sector 10. They will invest over ₹80 billion and create 5000+ jobs. Central government approval is pending.

SEMI and IESA unite to boost domestic semiconductor sector

SEMI and the India Electronics and Semiconductor Association (IESA) have partnered, with IESA joining

SNIPPETS

- Fujifilm Electronic Materials plans entry into Indian semiconductor market
- Infineon considers entering India's chip market, says IT Minister
- Army halts Dhaksha drone contract amid Chinese components concerns
- Darsh Dronobotics partners with Canadian firm for hydrogen air taxi
- Tata Power's Tirunelveli facility begins solar cell production
- IT Minister meets Ecolab for pure water provision in semiconductor manufacturing
- State of Maine to have the world's first floating offshore wind turbine
- Chip Design startup BigEndian receives \$3 million investment

SEMI's semiconductor network and representing it in India. The partnership will further boost domestic production, workforce development, and policy advocacy, aligning with India's 'Make in India' initiative.

India and Singapore forge semiconductor and digital tech deals during PM visit

During PM Modi's visit to Singapore, India and Singapore signed an MoU for the 'India-Singapore Semiconductor Ecosystem Partnership.' This agreement seeks to facilitate Singaporean investment in India's semiconductor sector, enhancing bilateral collaboration in this crucial industry.

Indian drone manufacturer integrates the Dassault Systèmes cloud platform

Paris-based Dassault Systèmes announced that Indian drone manufacturer Magic Myna is using its '3DEXPERIENCE' cloud platform to improve UAV design and development. The platform enhances collaborative design, simulation, and data management, helping Magic Myna develop lighter, more stable drones for sectors like healthcare and agriculture.

Skye Air partners with Kerala hospital for drone-based delivery

Delhi-based drone startup Skye Air Mobility has partnered with CARiTAS Hospital in Kottayam, South Kerala, to use drones to deliver medical supplies and test samples. This initiative aims to reduce delivery times from hours to minutes, cut carbon emissions, and enhance regional healthcare efficiency. The service will link

the hospital with remote areas and begin trial runs soon.

Dixon partners with HP India to make laptops and PCs

Dixon's subsidiary Padget Electronics has signed an MoU with HP India to produce PCs and laptops in a new 27,870 square metres (300,000 square foot) plant in Oragadam, Tamil Nadu. The facility, supported by the PLI 2.0 Scheme, aims to manufacture up to 2 million units annually and create around 1500 jobs. Production is expected to start by February 2025.

BPE opens battery manufacturing factory in Greater Noida

Best Power Equipments (BPE) has opened a new 1858 square metres (20,000 square foot) factory in Greater Noida, focused on manufacturing large-scale lithium-ion batteries and battery-energy storage systems (BESS). The facility features advanced automation and aims to enhance production capacity and market presence locally and in Southeast Asia and the Middle East.

Samsung India cutting jobs as market slows down

Samsung Electronics is planning to lay off over 200 executives in India, impacting about 9-10% of its managerial staff across various departments. This move comes as growth slows due to decreased consumer demand. Affected employees will receive severance packages. Additionally, Samsung's Chennai factory is facing strikes and operational challenges. The company is considering restructuring and further layoffs, with final decisions expected after Diwali.
