

computing (HPC), and artificial intelligence (AI). Utilising TSMC's CoWoS 2.5D packaging, it delivers 8Tbps/mm bandwidth density, reducing I/O

complexity, power consumption, and latency. Key features include high bandwidth density, power efficiency,

and low-latency interconnects. It supports various protocols, live per-lane health monitoring, and operates at 24Gbps, adhering to UCIe specification rev 1.1 with robust testability and debug features.

MANUFACTURING EQUIPMENT

AI-powered AOI platform

Test Research, Inc. (TRI) introduced the TR7950Q SII Wafer Inspection Platform, an AI-powered AOI solution

for the semiconductor and advanced packaging industry. It features a 25MP camera with 2.5µm resolution and a 12MP camera with 0.55µm microlens for

high-resolution 2D/3D DFF inspection. Key aspects include 3.5µm high-resolution 3D SEMI back-end and mini-LED inspection, advanced wide spectrum light, improved solder measurement accuracy, and an Industry 4.0 ready platform. The TR7007Q SII-S and TR7700Q SII-S inspect mini-LEDs, C4 bumps, and more. An X-ray inspection demo station and a TGV metrology tool are also featured.

AUTOMATION

LPG and PNG gas leak detectors

Hikvision India has introduced the HF-GP110 and HF-GN110 gas leak

detectors, designed for liquefied petroleum gas (LPG) and piped natural gas (PNG) leaks. These

detectors enhance safety in residential and commercial kitchens by alerting users to gas leaks, preventing potential fire hazards.

Ideal for homes, community kitchens, restaurants, and hotels, the detectors feature multiple alarm functions, test and silence options, fault notifications, and data log-saving capabilities. Operating on a 12-volt power supply with an 85dB alarm, they can integrate with fire alarms, intrusion alarms, video door phones, and home automation systems for comprehensive safety.

Scalable 3-phase UPS

Numeric has launched the Keor MP, a new addition to its 3-phase UPS systems, with ratings from 60kVA to 200kVA and scalability up to 1.2MW. It boasts up to 96% efficiency, advanced Li-ion battery technology, and a compact design,

reducing the footprint by up to 43% compared to traditional UPS systems. Key features include N + X redundancy, unity power factor, dual input design, controlled noise levels, and comprehensive real-time monitoring. The Keor MP's modular architecture ensures low MTTR and high MTBF, making it ideal for critical applications in IT, healthcare, data centres, and infrastructure.

Filtered fumes exhaust

Metcal has launched the BVX-250 Fume Extraction System, a portable, 2-port fume extractor featuring a

HEPA filtration system with 99.97% efficiency. This model introduces enhanced usability with a patented,

front-facing main filter and an easily accessible pre-filter drawer, enabling filter changes in under 30 seconds.

Additionally, it includes a patented 360° rotating exhaust diverter for customisable airflow. Key features are easy filter changes, an LED status ring, double the suction of previous models, quiet operation, three power levels, and compatibility with Metcal's CV and GT soldering systems. Optional deep bed gas filter and new nozzles are available.

TEST & MEASUREMENT

RF conformance tester

Anritsu Corporation has upgraded its new radio RF-conformance test system ME7873NR Lite model, to support both RF and protocol

conformance testing for 5G devices in a single-box setup. This integration streamlines the testing process, reducing hardware requirements and test times by 20%. Key features include support for 5G FR1 TRx, select performance, and radio resource management tests. The Lite model offers a cost-effective solution, ideal for essential conformance testing with scalability for future needs. Existing customers can upgrade seamlessly, optimising their investment and ensuring efficient, reliable testing with reduced complexity and cost.
