

in January 2024. The state's updated semiconductor manufacturing and fabless policy includes financial assistance and incentives for electronics manufacturing. Odisha aims to collaborate with US universities on machine learning and AI and has signed MoUs with key industry organisations to boost semiconductor capabilities.

Maharashtra approves ₹810 billion electronics projects before polls

Maharashtra's cabinet approved seven major industrial projects before the assembly elections, totalling over ₹810 billion, including JSW's investments in electric vehicles, lithium batteries, and the Talaja semiconductor plant. These projects are expected to create 20,000 jobs. The projects' locations include Konkan, Marathwada, and Vidarbha, aiming to boost regional employment and address prior criticisms of lost investments.

Polymatech acquires Nisene to build chip fabrication capabilities

Polymatech Electronics has acquired California-based Nisene Technology Group Inc. through its Singapore subsidiary, enhancing its semiconductor chip fabrication and testing capabilities. The acquisition will integrate Nisene's expertise with Polymatech's Sapphire technology, leading to a new multi-wafer technology. The company will invest up to \$500 million to advance its operations and aims to reach \$5 billion in revenue by 2030.

Vivo's new Indian plant eyes localisation of components

Vivo will enhance local sourcing of components like camera modules and OLED displays at its new 169-acre manufacturing facility in Greater Noida. The facility aims to double production capacity to 120 million units. It has obtained a partial occupancy certificate from the Yamuna Expressway Industrial Development Authority (YEIDA) for this project. With over ₹35 billion invested in India over the past decade, Vivo's strategy includes local partnerships

- HPL Electric teams with G Ramway to make relay switches
- Liberal Scientific Technologies to introduce SiC, GaN production tech in India

and focusing on products tailored to Indian consumers.

Tata's Tamil Nadu facility may begin assembling iPhones in November

Tata Electronics' new iPhone plant in Hosur, Tamil Nadu, is expected to start production in November. Spanning 250 acres, it will be Apple's fourth assembly plant in India and Tata's second for iPhones. The facility is set to employ 50,000 workers, reportedly more women, and will use enclosures from an existing component factory.

CG Power onboards top consulting MNC for Gujarat OSAT construction

CG Power has roped in Jacobs, a management consulting firm, to build its upcoming OSAT (Outsourced Semiconductor Assembly and Testing) plant in Sanand, Gujarat, with a production capacity of up to 15 million daily units. Jacobs, a turnkey contractor, has built leading fabs for chipmakers such as Intel and TSMC. The company has more than 80% of its workforce based out of India.

YEIDA to develop electronics manufacturing cluster in Uttar Pradesh

The Yamuna Expressway Industrial Development Authority (YEIDA) will establish a 200-acre electronics manufacturing cluster in Uttar Pradesh under the EMC 2.0 scheme. The project aims to boost the state's economy and create jobs. Havells India will be the anchor tenant, investing \$8 billion and creating over 1000 jobs. Yeida will receive \$1.4 billion for infrastructure and facilities, with operations expected to begin by 2026.

RRP Electronics to invest \$240 billion in Maharashtra OSAT unit

RRP Electronics Ltd will invest \$240 billion to build a 3716.12-square-metre OSAT facility in Mahape, Maharashtra, with operations starting September 16, 2024. Partnering with HMT Zurich, the project aims to cut India's chip import reliance by 25%. The expansion will create 4000 jobs and boost local semiconductor manufacturing.

ZETWERK to build SMILE Electronics' IT hardware

Contract manufacturer ZETWERK has partnered with Bengaluru's SMILE Electronics to establish three IT hardware manufacturing facilities in India, including sites near Bengaluru, Tamil Nadu, and Andhra Pradesh. The new plants will feature automated production lines with a capacity of 1.8 million units per year for desktops, laptops, and other electronics. This collaboration aims to expand SMILE Electronics' factory count and enhance Zetwerk's nationwide presence in electronics manufacturing.

Optimus manufactures telecom gear for Tata's Tejas Networks

Contract manufacturer Optimus Electronics has started making telecom equipment for Tata's indigenous Tejas Networks under the government's PLI scheme. The Noida facility is producing 4G baseband units, remote radio heads, optical network terminals, broadband switches, and routers. This effort supports domestic manufacturing growth and India's self-sufficiency in the telecom sector.
